Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories for the Lab, Prototyping, Test Systems, and Facility Installations

Example 1U ¼-rack 4 ModBlock set for 19 " rack-mount, front view

New! PDV receivers (pages 49-68) and PDV transceivers (pages 91-96)

ModBlocks Catalog
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
Note1: This document is in Adobe pdf file format and contains hyperlinks for click convenience. Hyperlinks are provided for the Table of Contents, web addresses, any blue text, and any referenced figures or page numbers. The mouse cursor should change to a pointing finger when a hyperlink exists. Right click "Next" or "Previous" arrows in Adobe Reader for more arrow options.

Note 2: Readers are encouraged to suggest other ModBlocks they would like to see made available. Send an email to ModBlocks@tmeplano.com.

Note 3: See the Abbreviations in the reference section on page 188 as needed.
Table of Contents (hyperlinked)The ModBlock System10
Overview ..... 10
Fiber Optic ModBlocks ..... 11
Microwave ModBlocks ..... 12
High-Speed Logic ModBlocks ..... 12
Utility ModBlocks ..... 12
ModBlock Accessories ..... 12
DC Power Port ..... 13
LAN Port. ..... 14
Basic LED Indicators ..... 14
Part Numbering ..... 15
Packaging ..... 15
Multiple ModBlock Mounting Arrangements ..... 16
Common ModBlock Specifications ..... 19
Fiber Optic ModBlocks. ..... 20
Common Specifications ..... 20
CW Lasers ..... 21
F100A-*, CW Laser, Fixed Wavelength, DWDM, SBS, Single-mode PM ..... 21
F110A, CW Laser, Tunable, C-Band 50 GHz DWDM, Single-mode PM ..... 23
F111A, CW Laser, Tunable, L-Band 50 GHz DWDM, Single-mode PM ..... 23
Modulators ..... 25
F120A, Lithium Niobate Intensity Modulator, 13 GHz Class ..... 26
F121A, Lithium Niobate Intensity Modulator, with Modulator Driver, 13 GHz Class ..... 27
F122A, Lithium Niobate Phase Modulator, 13 GHz Class. ..... 29
F123A, Lithium Niobate Phase Modulator, with Modulator Driver, 13 GHz Class ..... 29
F124A, Electro-Absorptive (EA) Modulator, 10 Gb/s Class ..... 29
F124A, Electro-Absorptive (EA) Modulator, with Modulator Driver, $10 \mathrm{~Gb} / \mathrm{s}$ Class ..... 29
Analog Transmitters ..... 29
F101A-*, Analog Transmitter, DWDM, Single-mode, 2 GHz Class ..... 29
F102A-*, Analog Transmitter, CWDM, Single-mode, 2 GHz Class ..... 31
F103A-*, Analog Transmitter, WDM, 50 micron Multimode, 2 GHz Class ..... 33
F104A-*, Analog Transmitter, WDM, 62.5 micron Multimode, 2 GHz Class ..... 33
Digital Transmitters ..... 34
F140A-*, Digital Transmitter, Fixed Wavelength DWDM, Lithium Niobate, $13 \mathrm{~Gb} / \mathrm{s}$ Class ..... 34
F141A, Digital Transmitter, Tunable, C-band 50 GHz DWDM, Lithium Niobate, 13 Gb/s Class ..... 37
F142A, Digital Transmitter, Tunable, L-band 50 GHz DWDM, Lithium Niobate, 13 Gb/s Class ..... 37

Third Millennium Engineering www.tmeplano.com
F145A-*, Digital Transmitter, Fixed Wavelength CWDM, 2.7 Gb/s Class, Single-mode ..... 40
F146A-*, Digital Transmitter, Fixed Wavelength WDM, $2.7 \mathrm{~Gb} / \mathrm{s}$ Class, 50 micron Multimode ..... 42
F147A-*, Digital Transmitter, Fixed Wavelength WDM, 2.7 Gb/s Class, 62.5 micron Multimode ..... 42
F150A-*, Digital Transmitter, RZ, Fixed Wavelength DWDM, Lithium Niobate, $13 \mathrm{~Gb} / \mathrm{s}$ Class ..... 44
F151A-*, Digital Transmitter, RZ, Tunable DWDM, Lithium Niobate, 13 Gb/s Class ..... 44
F152A-*, Digital Transmitter, DPSK, Fixed Wavelength DWDM, Lithium Niobate, $13 \mathrm{~Gb} / \mathrm{s}$ Class ..... 44
F153A-*, Digital Transmitter, DPSK, Tunable DWDM, Lithium Niobate, 13 Gb/s Class ..... 44
Analog Receivers ..... 44
F160A, Analog Receiver, PIN-TIA, 10 GHz Class, Single-mode ..... 44
F162A, Analog Receiver, PIN-TIA, 10 GHz Class, 50 micron Multimode ..... 44
F164A, Analog Receiver, PIN-TIA, 10 GHz Class, 62.5 micron Multimode ..... 44
F161A, Analog Receiver, APD, 10 GHz Class, Single-mode ..... 46
F163A, Analog Receiver, APD, 10 GHz Class, 50 micron Multimode ..... 46
F165A, Analog Receiver, APD, 10 GHz Class, 62.5 micron Multimode ..... 46
F166A, Analog Receiver, AGC-PIN, 2 GHz Class, Single-mode ..... 48
F167A, Analog Receiver, AGC-PIN, 2 GHz Class, 50 micron Multimode ..... 48
F168A, Analog Receiver, AGC-PIN, 2 GHz Class, 62.5 micron Multimode ..... 48
PDV Receivers ..... 49
Brief Specifications for PDV Receivers ..... 50
F170A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, for PDV Back-Reflecting Probe ..... 51
F170A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, for PDV Back-Reflecting Probe ..... 51
F171A-AC, Analog Receiver, APD, 10 GHz Class, AC-coupled, for PDV Back-Reflecting Probe ..... 53
F171A-DC, Analog Receiver, APD, 10 GHz Class, DC-coupled, for PDV Back-Reflecting Probe ..... 53
F172A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, for PDV Non-Back-Reflecting Probe ..... 56
F172A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, for PDV Non-Back-Reflecting Probe ..... 56
F173A-AC, Analog Receiver, APD, 10 GHz Class, AC-coupled, for PDV Non Back-Reflecting Probe ..... 58
F173A-DC, Analog Receiver, APD, 10 GHz Class, DC-coupled, for PDV Non Back-Reflecting Probe ..... 58
F175A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Back- Reflecting Probe ..... 60
F175A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Back- Reflecting Probe ..... 60
F176A-AC, Analog Receiver, APD, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Back- Reflecting Probe ..... 63
F176A-DC, Analog Receiver, APD, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Back- Reflecting Probe ..... 63
F177A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Non-Back- Reflecting Probe ..... 65
F177A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Non-Back- Reflecting Probe ..... 65
F178A-AC, Analog Receiver, APD, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Non Back-Reflecting Probe ..... 68
F178A-DC, Analog Receiver, APD, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Non Back-Reflecting Probe ..... 68
Custom PDV Receiver Equipment ..... 70

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## The ModBlock System

## Overview

"ModBlocks" is the name for a TME standard product line consisting of a modular system of fiber optic, microwave, high-speed logic, and utility functional blocks (module or ModBlock) and accessories. The product line is designed for bench-top use in R\&D laboratories, implementing manual and automatic test equipment and test systems, prototyping new products, and for installations in facilities and vehicles. A special class of coherent receiver and transceiver ModBlocks is offered for the Photonic Doppler Velocimeter (PDV) "shock physics" community.

ModBlocks are based upon tried-and-proven, high-complexity, multi-functional, fiber optic, microwave, and high-speed logic equipment custom made by TME over the last decade. See full custom catalog at www.tmeplano.com for details. ModBlocks are low cost standard products because engineering and tooling costs have been spread over the product line due to design commonalities. Readers are encouraged to suggest other ModBlocks they would like to see made available by sending an email to ModBlocks@tmeplano.com. TME historically produces full custom products, so you can buy exactly the PDV system you need. Send an email to ModBlocks@tmeplano.com for initial inquiries and receive a free quote.

Most ModBlocks implement one active or passive optical or electrical signal processing function, while some ModBlocks combine two or more single functions into one unit. Each ModBlock is mechanically and electrically designed for stand-alone use or in combination with one or more ModBlocks of the same or different kind. ModBlocks are $1 / 4,1 / 2$, or full 19 " rack width and $1 / 2,1,2$, or 3 U's high ( $1 \mathrm{U}=1.75$ ") and between $4.7^{\prime \prime}$ and $12.7^{\prime \prime}$ deep in 2 " steps. ModBlocks can be firmly fastened together horizontally and/or vertically in any combination or size to form a variety of possible desktop or rack-mount configurations.

All active ModBlocks are powered by 12 volts DC (9-15V) via a pair of daisy-chained rear panel 2-pin connectors. DC power entering one ModBlock can be connected to another ModBlock in "daisy-chain" fashion. DC power is sourced by either by a commercial AC-to-12VDC power supply (desktop or wall-mount style) or a TME power supply ModBlock. More details on cables, power supplies, and arrangements are given in the ModBlock Accessories section starting on page 177

All active ModBlocks contain an embedded controller which manages front panel manual controls and displays, remote control and display, and internal functional circuitry. Remote

Third Millennium Engineering www.tmeplano.com

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories operation is implemented via a standard 10Base-T Ethernet LAN port on the rear panel. Standard Cat5 cables, switches, and routers are used as needed with multiple ModBlocks for computer control. One Ethernet link is required per ModBlock under (optional) remote control. Front panel bi-color LED indicators are provided to monitor output voltage tolerance of all internal power supplies, LAN connectivity, and ModBlock control mode. All ModBlocks can be used manually without using remote communication.

Depending on the function, ModBlock prices range from $\sim \$ 1 \mathrm{~K}$ to $\sim \$ 47 \mathrm{~K}$ (typically $\$ 5 \mathrm{~K}-15 \mathrm{~K}$ ). Some ModBlocks are stocked and many have a 2-4 week delivery time. Otherwise, delivery time is the longest lead-time major component "pacing item" in price lists) plus 1 week, typically 6 weeks. Unless otherwise specified, all ModBlocks are warranted for one year. Warranty excludes excessive electrical or optical input power as applicable, electrostatic discharge (ESD) damage, optical connector damage (dirt, wrong connector type), and general abuse. See warranty details in the "Standard Warranty" section on page 196.

Other ModBlocks will be added over time and upon user request. Send email requests to ModBlocks@tmeplano.com. The development priority of "Coming soon!" ModBlocks can be influenced by sending an email request to ModBlocks@tmeplano.com to make it sooner!

## Fiber Optic ModBlocks

Fiber optic ModBlocks are available for single mode and multimode wavelengths in the 850 nm (SFP), 1310 nm , and 1550 nm bands. Digital data rates for 2.5 and $10 \mathrm{~Gb} / \mathrm{s}$ regions and analog bandwidths up to 10 GHz class are provided. Passive fiber optic ModBlocks includes splitters, couplers, WDMs, circulators, isolators, and filters. Active fiber optic ModBlocks include:

- Amplifiers (EDFA, SOA)
- Switches (SPDT, transfer, SP4T, SP8T)
- Lasers (fixed WDM, CWDM and DWDM, tunable C or L band DWDM)
- Modulators (LN, EA, NRZ, RZ)
- Transmitters (analog, digital)
- Receivers (analog, PDV analog, limiting, digital)
- Transceivers (SFP, analog, digital, PDV)
- Phase Shifters and Attenuators (analog, digital control)
- Filters (tunable, C or L band, DWDM)
- Photonic Doppler Velocimeter (PDV) lasers and receivers
- Miscellaneous (Super-Luminescent LED)

Third Millennium Engineering www.tmeplano.com

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories Microwave ModBlocks

Microwave ModBlocks are available with 50 impedances from DC to 26.5 GHz ( 75 ohms on request). Passive microwave ModBlocks include splitters, couplers, circulators, and fixed filters. Active microwave ModBlocks include:

- Amplifiers (linear, limiting, modulator driver)
- Switches (SPDT, transfer, 2P3T, SP4T, SP6T)
- Phase Shifters and Attenuators (analog, digital control)
- Oscillators (fixed, VCO, sine, square)
- Miscellaneous (doublers, mixers, power detectors, phase-frequency comparators, counters)

## High-Speed Logic ModBlocks

High-speed logic ModBlocks are available for speeds up to 13 GHz ( 25 GHz on request). Clock-Data Recovery (CDR) ModBlocks are available in three data rate ranges from $10 \mathrm{Mb} / \mathrm{s}$ to 13 $\mathrm{Gb} / \mathrm{s}$. All inputs and outputs are differential (can be used single-ended) and AC-coupled ( 0.1 uF or $\sim 35 \mathrm{KHz}$, DC coupling on special request). Active high-speed logic ModBlocks include:

- Gates (AND/NAND/OR/NOR, XOR/XNOR)
- Fan-outs (1 to 2, 1 to 4 )
- Selectors (2 to 1, 4 to 1 )
- Pre-scalars (div2, div4, div8, div1-2-4-8)
- Flip-Flops (D, T)
- Time Delays (0-120 ps)
- Encoders (differential a.k.a. DPSK, NRZ-to-RZ)
- Encoders with Clock Time Delay (differential a.k.a. DPSK, NRZ-to-RZ)
- Phase Locked Loops a.k.a. Clock-Data Recovery (9-13 Gb/s, 2.5-10 Gb/s, 10M-2.7Gb/s)

## Utility ModBlocks

Utility ModBlocks are available for programmable DC power, digital I/O, and analog I/O. Active utility ModBlocks include:

- Programmable Power Supplies (1W to 20W, low to high voltage or current)
- Digital I/O (3.3V, 5V, buffered)
- Analog Output (DAC)
- Analog Input (ADC)

## ModBlock Accessories

ModBlock accessories are available for 12VDC power supplies, cable assemblies, adapters, SFP modules, hardware, tools, supplies, and software. ModBlocks accessories include:

- Cable Assemblies (2-pin DC power, fiber optic, coax, LAN, AC power, utility)
- Adapters (2-pin DC power, fiber optic, coax, LAN, AC power, utility)
- AC-to-12VDC Power Supplies (24W to 120W, desktop, wall-mount)
- Networking (switch, router)

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

- SFP Modules
- 12VDC Current Sensor
- Hardware (horizontal fastener kits, vertical fastener kits, rack-mount kits)
- Tools and Supplies (fiber optic, microwave)
- Software (GUI)

## DC Power Port

All active ModBlocks are powered by 12 volts DC (9-15V) via a pair of rear panel 2-pin connectors. Either 2-pin connector can be used as the 12 VDC power input to a ModBlock. The other 2-pin connector can be used to connect 12 VDC power to another ModBlock in "daisy-chain" fashion using an A100 daisy-chain power jumper cable.

The main limitations to daisy-chain length are the 5 amp rating of the 2-pin connectors and the available 12 VDC power supply current needed to power a particular string of ModBlocks. If more total current is needed, then a larger 12 VDC power supply can be used. Alternatively, one or more additional 12 VDC power supplies can be added to the system to power separate daisychains. In this latter case, it is very important to keep each power supply and their daisy-chains electrically separate from other power supplies and their daisy-chains. In large ModBlock systems, the recommended powering method is to use a single large power supply with a DC power fan-out (such as A340A) and limit the daisy-chains to 5 amps each. A 12VDC current sensor ( 10 milliohm resistor and connectors) is provided as a ModBlock accessory.

Various ModBlock Power Arrangements

## LAN Port

All active ModBlocks have an Ethernet 10Base-T LAN connector (RJ45-8) on the rear panel. The LAN connector provides a TCP/IP communication link to an external computer, switch, or router for optional remote control and monitoring of ModBlock functions.

## Basic LED Indicators

All active ModBlocks have at least three basic front panel bi-color LED indicators. The LEDs are used to monitor the output voltage tolerance of all internal power supplies, LAN connectivity, and ModBlock control mode.

The power monitor LED (labeled "Power") indicates the combined status of all internal power supply output voltages. A green LED color indicates all internal power supplies are within $\pm 10 \%$ of their nominal output voltage. A blinking yellow LED color indicates one or more internal power supplies are above or below $10 \%$ of its nominal output voltage. No LED color (i.e., off) indicates the 12 VDC inlet supply is off (i.e., less than $\sim 3$ volts), which also means that all other internal power supply output voltages are off. Note that a $\pm 3 \mathrm{~V}$ tolerance is used for the 12 VDC power input instead of $\pm 10 \%$.

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
The LAN connectivity LED (labeled "Link/Act") indicates the status of the TCP/IP link to an external computer, switch, or router. A green LED color indicates a link has been made and a blinking yellow color indicates communication activity is occurring. No LED color (i.e., off) indicates there is no remote connection or the connection is not valid.

The control mode LED (labeled "Rem/LLO") indicates the ModBlock control mode. A green LED color indicates the ModBlock is in remote control mode, but manual control will still operate the ModBlock and over-ride remote control. A yellow LED color indicates the ModBlock is in remote control mode and all manual controls will not operate (i.e., "local lock-out" or LLO). No LED color (i.e., off) indicates the ModBlock is in manual control mode only (i.e., remote control not operative).

## Part Numbering

ModBlock part numbers begin with a letter followed by three digits and a letter, according to the following table:

| Part Number <br> Prefix | ModBlock <br> Type |
| :---: | :---: |
| $\mathrm{A}^{*}$ | Accessories |
| $\mathrm{F}^{*}$ | Fiber Optic |
| $\mathrm{L}^{*}$ | Logic |
| $\mathrm{M}^{*}$ | Microwave |
| $\mathrm{U}^{*}$ | Utility |

## Packaging

All ModBlock enclosures are designed for indoors desktop use and/or 19" rack-mount use via detachable rack-mount ears. All enclosures are made from aluminum with screw-on covers for a sealed and thermally conductive design. Enclosure surfaces are black anodized (anti-static) with white graphics.

Depending upon the ModBlock function, enclosures are either $1 / 4$ or $1 / 2$ width in rack-mount terms (4.18" or $8.37^{\prime \prime}$ respectively) and are either $1 / 2 \mathrm{U}, 1 \mathrm{U}$, or 2 U high in rack-mount terms $(0.875$ ", 1.75 ", or 3.5 " respectively). Enclosure depths range from $4.7^{\prime \prime}$ to $10.7^{\prime \prime}$ in 2 " steps.

ModBlocks of any size can be securely fastened together using $1 / 4$ " \#6-32 flat head screws in both vertical and horizontal directions to form a variety of desktop and rack-mount configurations. $1 / 4$ or $1 / 2$ width ModBlocks can be horizontally fastened to become full rack width (or wider). $1 / 4,1 / 2$, or full width ModBlocks can be vertically fastened into desktop or rack-mount stacks of various heights. $1 / 2 \mathrm{U}$ high ModBlocks use left and right plates to adapt them to 1 U or more.

Other finishes and colors are available on request. Examples are laser engraved graphics (white) on black anodized aluminum, natural aluminum (silver) with black (or other color) silkscreened graphics, or painted aluminum with black or color graphics. Customer logos or special graphics can also be applied.

## Multiple ModBlock Mounting Arrangements

A wide variety of arrangements are possible for fastening multiple ModBlocks together. Detachable 1U, 2U, 3U, and 4U rack-mount ear kits (A421A through A424A, page 184) are provided for horizontal mounting into a 19 " rack. 2U, 3U, and 4 U vertical fastener kits (A412A through A414A, page 183) are provided for vertical desktop stacking.

## Common ModBlock Specifications

Unless otherwise specified, the following specifications apply to all ModBlock models.

| Parameter | Description |
| :---: | :---: |
| Chassis | - Anodized aluminum enclosure materials, ESD compliant antistatic surfaces <br> - Black aluminum color with white graphics on front and rear panels |
| Environment | - For indoor use in office, lab, factory, or vehicle environments. Not for outdoor use. <br> - Operating temperature range: $5^{\circ} \mathrm{C}$ to $45^{\circ} \mathrm{C}$ minimum <br> - Storage temperature range: $-20^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ minimum <br> - Relative humidity range: $10 \%$ to $90 \%$ minimum, non-condensing, minimum <br> - Shock and vibration range: 2G's minimum |
| Cooling | Conduction and convection (no fans) |
| Connectors | - Front panel: all optical and microwave I/O connectors <br> - Rear panel: DC power inlet and RJ45-8 LAN Port (active ModBlocks only) |
| Power (active ModBlocks) | - Power port via two rear panel 2-pin "Utility" connectors, daisy-chained <br> - 12 volts DC $\pm 3$ volts DC ( 9 to 15 VDC) <br> - Front panel bi-color "Power" status LED, monitors all internal supplies <br> - No power switch (unplug rear panel Utility connector if needed) |
| Computer Control (active ModBlocks) | - 10 Base-T LAN port, internal controller with non-volatile memory, C-program <br> - Manages all manual controls and displays for local operation <br> - Provides remote computer operation of all manual control and display functions <br> - Front panel bi-color "Link/Act" status LED, monitors LAN link and activity <br> - Front panel bi-color "Rem/LLO" status LED, monitors remote and local lockout status |
| Safety Ratings | Not required for passive ModBlocks or 12 VDC powered ModBlocks. AC to DC power supply ModBlocks not safety agency or FCC approved. For industrial use only by customer and their sub-contractors. Customer assumes liability for use. However, safety agency approved components (UL, CSA, VDE, etc.) and safe engineering practices used for grounding, fusing, labeling, flammability, insulation, wiring, etc., particularly for any primary AC power circuitry. Six-sided aluminum enclosure, and good engineering practices used for conductive and radiative EMI/RFI performance. |
| Documentation | Simple operating manual includes operating instructions, detailed descriptions, block diagrams, performance specifications, pictorial views, and software command set. Requires user to have basic knowledge of high-speed fiber optics, electronics, and related test equipment (brief explanations without lengthy tutorials). |
| Shipping | Can be shipped via commercial carriers with normal cushioned packing methods. Cover all microwave and optical ports with anti-static connector caps and then enclose unit in an anti-static bag or container prior to packing for shipment. ModBlocks contain no hazardous materials, liquids, etc. |

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## Fiber Optic ModBlocks

A variety of Fiber Optic ModBlocks are offered using a variety of active and passive single mode and multi-mode devices. Such devices include lasers, receivers, modulators, transceivers, analog and digital transmitters and receivers, switches, amplifiers, phase shifters, attenuators, filters, passive devices, and other items. Chassis rear views are shown in the "Common Packaging Data" section on page 186. Price and delivery are shown in the "Domestic USA Pricing" section starting on page 199.

WARNING: Proper fiber optic connector cleaning practices must be used with all fiber optic ModBlocks to avoid connector damage from invisible "dirt" (connector damage is not warranted). See the Cleaning Supplies section on page 185 of the "ModBlock Accessories" section for recommended fiber optic cleaning supplies (swabs and "wipe box").

## Common Specifications

Unless otherwise specified, the following key specifications apply to all Fiber Optic ModBlock models.

Key Specifications

| Parameter | Value | Units | Qualifier |
| :--- | :---: | :---: | :--- |
| Channels | 1 | - | - |
| Connectors, high-speed electrical | SMA female | - | - |
| Impedance, high-speed electrical | 50 | ohms | nominal |
| I/O Coupling, high-speed electrical | $\mathrm{AC}, 0.1 \mathrm{uF}$ | - | high performance capacitor |
| Low Frequency Cutoff, high-speed electrical | 35 | KHz | -3 dB point, typical |
| Connectors, fiber optic | FC/UPC <br> Metal ferrule | - | - |
| Connectors, fiber optic | FC/APC <br> ceramic ferrule | - | PDV receivers F170-F178 <br> PDV transceivers F235-F238 |

Models with high-speed electrical differential inputs and/or outputs can be used singleended or differentially. When used single-ended, unused inputs or outputs should be terminated with a 50 -ohm load (see Signal Adapters starting on page 180). All high-speed electrical inputs and outputs are AC-coupled with a high performance 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency cutoff), which can be ordered DC-coupled if required.

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## CW Lasers

Solid-state continuous wave (CW) laser ModBlocks are provided for the 1550 nm band with output power up to 10 mW ( +10 dBm ). All models have single mode polarization maintaining (PM) fiber outputs. Various fixed wavelength and tunable wavelength DWDM ModBlocks are provided for the C and L bands. The fixed wavelength models shown are selected from the large number of possible laser component types produced. Users are encouraged to inquire about and request models not shown by sending an email to ModBlocks@tmeplano.com.

Single mode laser ModBlocks can be used for the coherent laser source in many Photonic Doppler Velocimeter (PDV) applications not requiring watt-level power. Models are provided with output power up to 15 mW and typical coherence lengths up to $\sim 40$ meters. On request, other laser types can be used ( $\sim 500$ meters @ $6 \mathrm{~mW}, \sim 4000$ meters @ 20 mW , ~200 meters @ 50 mW , etc.). These lasers can be used with the several PDV receiver ModBlocks offered (F170-F173) to implement a complete PDV front end system, along with the appropriate fiber optic probe and realtime oscilloscope.

## F100A-*, CW Laser, Fixed Wavelength, DWDM, SBS, Single-mode PM

DWDM fixed wavelength CW laser ModBlocks are provided for the 1550 nm region in the C and $L$ bands. Laser wavelengths range from 1528.77 nm to 1564.68 nm on $100 \mathrm{GHz}(0.8 \mathrm{~nm})$ channel spacing (43 wavelengths). These lasers are DFB types, optically isolated, thermally stabilized, and have polarization maintaining single-mode fiber outputs (slow axis aligned to connector key). Laser wavelengths can be (thermally) adjusted $\pm 100 \mathrm{GHz}$ minimum, allowing wavelengths to be finely tuned or tuned to adjacent 50 GHz channels. Output power is fixed and a laser enable switch is provided. SBS suppression is provided (can be used for a "channel ID"), which is required for long haul spans with optical amplifiers. SBS amplitude and frequency (channel ID) are adjustable and an enable switch is provided. An internal user-replaceable "crash" cable is provided (laser output) for repair convenience in case of optical connector damage. These models are normally used as the optical source for a lithium niobate modulator to form a digital transmitter.

Front panel pushbuttons and a numeric readout provide manual control of the laser temperature (for fine tuning of the wavelength), SBS amplitude, and SBS frequency (which can also be operated remotely). The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Red indicates Laser Temperature control mode, yellow indicates SBS Frequency control mode, green indicates SBS

Third Millennium Engineering
www.tmeplano.com
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
Note: There are many possible DWDM wavelengths, so only selected popular C-band 100 GHz channels are shown (bold ones preferred). However, any DWDM wavelength can be supplied on special order. See the "ITU Fiber Optic Frequencies, Wavelengths, and Channels for C and L bands" section on page 189 of the "Reference Data" section for the proper channel number to use to complete the part number "dash ending" as above. For example, the part number for a 50 GHz channel in the L-band at 1609.62 nm (channel Q62) is F101A-Q62.

## F110A, CW Laser, Tunable, C-Band 50 GHz DWDM, Single-mode PM

## F111A, CW Laser, Tunable, L-Band 50 GHz DWDM, Single-mode PM

DWDM tunable wavelength CW laser ModBlocks are provided for the 1550 nm region in the $C$ and $L$ bands. Adjustable laser wavelengths range from 1528.77 nm to 1563.86 nm (F110A) and 1568.77 nm to 1607.47 nm (F110A) on $50 \mathrm{GHz}(0.4 \mathrm{~nm})$ channel spacing. These lasers are DSDBR types, optically isolated, thermally stabilized, and have polarization maintaining singlemode fiber outputs (slow axis aligned to connector key). The output power level is adjustable up to 10 mW and a laser enable switch is provided. SBS suppression is required for long haul fiber spans using optical amplifiers and is provided by using laser FM dithering and an SBS enable switch. An internal user-replaceable "crash" cable is provided (laser output) for repair convenience in case of optical connector damage. These models are normally used as the optical source for a lithium niobate modulator to form a digital transmitter.

## Modulators

Lithium niobate (LN) intensity modulators are currently offered, with and without modulator drivers. A LN intensity modulator is normally used with a fixed or tunable CW laser (such as the F100A, F110A, or E11A) to form an NRZ fiber optic transmitter. A modulator driver (such as the M211A, which is built in to the F121A) is required to attain the RF input drive level ( $\sim 5-6 \mathrm{Vpp}$ ) needed to attain a good extinction ratio (ER>10). An RZ fiber optic transmitter can be implemented by connecting an L162A or L163A NRZ-to-RZ Encoder ModBlock before the modulator driver. An RZ fiber optic transmitter can also be implemented by cascading two intensity modulators (with modulator drivers). In this case, an NRZ signal drives one modulator driver and a sine wave drives the other modulator driver. Sine wave timing adjustment relative to the NRZ signal is required so that the sine wave is time-positioned in the middle of the NRZ bit period.

Lithium niobate phase modulators (normally used for optical chirping) and electroabsorptive (EA) intensity modulators will be offered in the near future. Send an email request to ModBlocks@tmeplano.com to make it sooner!

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

F120A, Lithium Niobate Intensity Modulator, 13 GHz Class
This Lithium Niobate (LN) modulator ModBlock contains a wide bandwidth fiber optic intensity modulator with DC-coupled RF input. Internal user-replaceable "crash" cables are provided (optical input and output) for repair convenience in case of optical connector damage. Front panel pushbuttons and a numeric readout provide manual control of the modulator DC bias voltage, which can also be operated remotely. The mode pushbutton turns the display on or off. Pushbuttons with up and down arrows allow adjustment of the bias voltage when the display is on. Inherent to LN, the optical output will be inverted from the RF input signal when a positive LN bias voltage (up to $V$-pi) is used and will be non-inverted with a negative LN bias voltage (up to V-pi).

## Analog Transmitters

Fiber optic analog transmitter ModBlocks are provided for the 1310 nm and 1550 nm bands with output power up to $10 \mathrm{~mW}(+10 \mathrm{dBm})$. Models made with single mode (SM), 50 micron multimode (MM50), or 62.5 multimode (MM62.5 or MM62) fiber types are offered. Various fixed wavelength CWDM ModBlocks are offered for the 1310 and 1550 nm bands. Analog transmitter ModBlocks can be directly modulated (radio, analog, or digital) up to $\sim 3 \mathrm{GHz}$ or used CW. The models shown are selected from the large number of possible laser component types produced. Users are encouraged to inquire about models not shown by sending an email to ModBlocks@tmeplano.com.

Single mode analog transmitter ModBlocks used CW can be used for the coherent laser source in many Photonic Doppler Velocimeter (PDV) applications not requiring watt-level power. Models are provided with output power up to 2 mW and typical coherence lengths up to ~100 meters. On request, other laser types can be used ( $\sim 500$ meters @ $6 \mathrm{~mW}, \sim 4000$ meters @ 20 mW , ~200 meters @ 63 mW , etc.). These lasers can be used with the several PDV receiver ModBlocks offered (F170-F173) to implement a complete PDV front end system, along with the appropriate fiber optic probe and real-time oscilloscope.

## F101A-*, Analog Transmitter, DWDM, Single-mode, 2 GHz Class

DWDM fixed wavelength analog transmitter ModBlocks are provided for the 1550 nm region in the C and L bands. Laser wavelengths range from 1528.77 nm to 1562.23 nm on $100 \mathrm{GHz}(0.8$ nm ) channel spacing ( 43 wavelengths). These transmitters are directly modulated DFB types, highly linear, optically isolated, thermally stabilized, and supplied with non-polarized single-mode fiber outputs. Laser wavelength can be (thermally) adjusted $\pm 100 \mathrm{GHz}$ minimum, allowing wavelengths to be finely tuned or tuned to adjacent 50 GHz channels. Output power is fixed and a laser enable switch is provided. The analog modulation input is AC-coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ), has $\sim 2 \mathrm{GHz}$ bandwidth, and can accept radio, analog, or digital signals. It can be used as a CW laser source by terminating the analog input. An internal user-replaceable "crash" cable is

## F102A-*, Analog Transmitter, CWDM, Single-mode, 2 GHz Class

CWDM fixed wavelength analog laser ModBlocks are offered for the 1310 nm region and the 1550 nm region in the C and L bands. Wavelengths range from 1270 to 1610 nm in 10 nm steps. These lasers are directly modulated DFB types, highly linear, optically isolated, not thermally stabilized, and supplied with non-polarized single-mode fiber outputs. Output power is fixed and a laser enable switch is provided. The analog modulation input is AC-coupled ( 0.1 uF , $\sim 35 \mathrm{KHz}$ ), has $\sim 2 \mathrm{GHz}$ bandwidth, and can accept radio, analog, or digital signals. It can be used as a CW laser source by terminating the analog input.

## Digital Transmitters

These ModBlocks convert an electrical digital input signal into a fiber optic digital output signal. Fixed and tunable wavelength DWDM transmitters using LN modulators are offered for 13 Gb/s class NRZ operation. Fixed wavelength CWDM (SM) and WDM (MM50 and MM62) transmitters using direct modulation are offered for $2.7 \mathrm{~Gb} / \mathrm{s}$ class NRZ operation. Fixed and tunable wavelength DWDM RZ and DPSK digital transmitters using LN modulators will be offered in the near future. Send an email request to ModBlocks@tmeplano.com to make it sooner!

## F140A-*, Digital Transmitter, Fixed Wavelength DWDM, Lithium Niobate, 13 Gb/s Class

DWDM fixed wavelength digital transmitter ModBlocks are provided for the 1550 nm region in the C and L bands. Laser wavelengths range from 1528.77 nm to 1564.68 nm on 100 GHz ( 0.8 nm ) channel spacing (43 wavelengths). These transmitters contain fixed wavelength DFB type lasers and adjustable LN modulators with non-inverting modulator drivers. They are optically isolated, thermally stabilized, and have polarization maintaining single-mode fiber outputs (slow axis aligned to connector key). Laser wavelength can be (thermally) adjusted $\pm 100 \mathrm{GHz}$ minimum, allowing wavelengths to be finely tuned or tuned to adjacent 50 GHz channels. Output power is fixed and a laser enable switch is provided. SBS suppression is provided (can be used for a "channel ID"), which is required for long haul spans with optical amplifiers. SBS amplitude and frequency (channel ID) are adjustable and an enable switch is provided. The digital modulation input is AC-coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ) and normally accepts an NRZ digital signal, but can accept analog or other digital signals within its bandwidth. These transmitters can be used as a variable power CW laser source by terminating the digital input and adjusting the LN bias voltage. An internal user-replaceable "crash" cable is provided (optical output) for repair convenience in case of optical connector damage. These models are normally used with a $13 \mathrm{~Gb} / \mathrm{s}$ class analog receiver (such as F160A or F161A), limiting receiver (such as F180A or F181A), or digital receiver (such as F200A or F201A) to form an inter-facility fiber optic data link up to $\sim 100 \mathrm{KM}$, fiber optic digital test systems, or general lab and development use. These models are also available with full front panel connector access to the internal laser, modulator, and modulator driver on special order if required.

F140A front chassis view, graphics layout, and simple block diagram

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories transmitters contain tunable DSDBR type lasers and adjustable LN modulators with non-inverting modulator drivers. They are optically isolated, thermally stabilized, and have polarization maintaining single-mode fiber outputs (slow axis aligned to connector key). The output power level is adjustable up to 10 mW and a laser enable switch is provided. SBS suppression is required for long haul fiber spans using optical amplifiers and is provided by using laser FM dithering and an SBS enable switch. The digital modulation input is AC-coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ) and normally accepts an NRZ digital signal, but can accept analog or other digital signals within its bandwidth. These transmitters can be used as a variable power CW laser source by terminating the digital input and adjusting the LN bias voltage. An internal user-replaceable "crash" cable is provided (optical output) for repair convenience in case of optical connector damage. These models are normally used with a $13 \mathrm{~Gb} / \mathrm{s}$ class analog receiver (such as F160A or F161A), limiting receiver (such as F180A or F181A), or digital receiver (such as F200A or F201A) to form an inter-facility fiber optic data link up to $\sim 100 \mathrm{KM}$, fiber optic digital test systems, or general lab and development use. These models are also available with full front panel connector access to the internal laser, modulator, and modulator driver on special order if required.

Front panel pushbuttons and a numeric readout provide manual control of laser wavelength, output power level, LN bias voltage, output crossover point, and LN drive level (which can also be operated remotely). The mode pushbutton changes the display and two bi-color mode LEDs (along with front panel graphics) indicate the parameter being displayed. For the lower LED, red indicates Wavelength control mode, yellow indicates Output Level control mode, and dark indicates off mode. For the upper LED, red indicates LN Bias control mode, yellow indicates Output Crossover control mode, green indicates LN Drive Level control mode, and dark indicates off mode. Pushbuttons with up and down arrows allow parameter adjustment for the mode indicated by the bi-color LEDs. Inherent to LN, the optical output will be inverted from the RF input signal when a positive LN bias voltage (up to $V$-pi) is used and will be non-inverted with a negative LN bias voltage (up to V-pi).

## Analog Receivers

Analog fiber optic receiver ModBlocks are offered for use in the 1310 nm and 1550 nm bands. PIN or APD photodiodes are used for models with 10 GHz class operation, which have single-ended AC-coupled RF outputs. PIN photodiodes with AGC are used for models with 2 GHz class operation, which have differential AC-coupled RF outputs. Models are offered with single mode (SM), 50 micron multimode (MM50), or 62.5 multimode (MM62.5 or MM62) fiber types.

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

Analog receivers are offered with 10 GHz class PIN photodiodes and transimpedance amplifiers for use in the 1310 nm and 1550 nm bands. RF outputs are single-ended and AC coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ). Models are offered with single mode (SM), 50 micron multimode (MM50), or 62.5 multimode (MM62.5 or MM62) fiber types. An internal user-replaceable "crash" cable is provided (optical input) on all models for repair convenience in case of optical connector damage.

A front panel bi-color "Over/OK" LED monitors the optical input power level. Green indicates optical input power exists and is within the normal operating range for the receiver. Red indicates optical input power exists, but is too high, risking receiver damage. Yellow indicates no (or too low) optical input power. The optical input power level can be monitored using the front panel "Mode" pushbutton and numeric readout, which can also be monitored remotely. The mode pushbutton turns the display on or off.

## PDV Receivers

Fiber optic receiver ModBlocks are offered for Photonic Doppler Velocimeter (PDV) applications in the 1550 nm C-band. Models are available with choices of 10 GHz class analog PIN or APD receivers, AC or DC coupled RF outputs, for use with back-reflecting or non-backreflecting probes, and with or without a red "spotting" laser. TME recommends AC coupled PIN receivers for most applications.

Summary of PDV Receiver ModBlock Types

| Model <br> Number | Receiver <br> Type | RF Output <br> Coupling | Probe <br> Type | Spotting <br> Laser? |
| :---: | :---: | :---: | :---: | :---: |
| F170A-AC | PII-TIA | AC | Back-Reflecting | No |
| F170A-DC | PII-TIA | DC | Back-Reflecting | No |
| F171A-AC | APD-TIA | AC | Back-Reflecting | No |
| F171A-DC | APD-TIA | DC | Back-Reflecting | No |
| F172A-AC | PIN-TIA | AC | Non-Back-Reflecting | No |
| F172A-DC | PIN-TIA | DC | Non-Back-Reflecting | No |
| F173A-AC | APD-TIA | AC | Non-Back-Reflecting | No |
| F173A-DC | APD-TIA | DC | Non-Back-Reflecting | No |
| F175A-AC | PIN-TIA | AC | Back-Reflecting | Yes |
| F175A-DC | PIN-TIA | DC | Back-Reflecting | Yes |
| F176A-AC | APD-TIA | AC | Back-Refflecting | Yes |
| F176A-DC | APD-TIA | DC | Back-Reflecting | Yes |
| F177A-AC | PIN-TIA | AC | Non-Back-Reflecting | Yes |
| F177A-DC | PIN-TIA | DC | Non-Back-Reflecting | Yes |
| F178A-AC | APD-TIA | AC | Non-Back-Reflecting | Yes |
| F178A-DC | APD-TIA | DC | Non-Back-Reflecting | Yes |

These receivers can be used with the several PDV laser ModBlocks offered (F100A-* or F110A) or other long-coherence laser to implement a complete PDV front end system, along with the appropriate fiber optic probe and real-time oscilloscope. High power optical splitters are also available (such as F310A or F311A) to operate multiple receivers from one high power laser. In addition, PDV transceiver ModBlocks (F235A on page 91 and F236A on page 96) are offered with both an internal 20 mW coherent laser, a PDV receiver, and a red "spotting" laser.

## Brief Specifications for PDV Receivers

All PDV receivers contain an analog 10 GHz bandwidth PIN-TIA or APD-TIA fiber optic receiver for C-band ( 1528 to 1563 nm ) operation with AC or DC coupled RF output. Model architectures are provided ( 30 dB VOAs, couplers, circulators) for use with back-reflecting or non-back-reflecting probes and with or without a "spotting" laser (red laser, switch). Target velocity range is 0 to $7500 \mathrm{~m} / \mathrm{s}$ ( DC coupled) or 0.05 to $7500 \mathrm{~m} / \mathrm{s}$ (AC coupled, $\sim 35 \mathrm{KHz}$ cutoff). Maximum laser input power is 500 mW or +27 dBm (circulator and/or coupler limited) with 1 to 2 dB loss to probe port for all models.

For back-reflecting ( BR ) probe model types, the probe port reflected input power ranges from 5 to 35 dBm maximum to -18 dBm minimum for PIN models and 2 to 32 dBm maximum to -25 dBm minimum for APD, depending on VOA setting. RF output voltage is $\sim 715 \mathrm{mVpp} @ 0 \mathrm{dBm}$ input for PIN models and $\sim 350 \mathrm{mVpp}$ for APD models. For non-back-reflecting (NBR) probe model types, the probe port reflected input power range is 7 dBm maximum to -15 dBm minimum for PIN models and 4 dBm maximum to -22 dBm minimum for APD. RF output voltage is $\sim 536 \mathrm{mVpp} @ 0$

Third Millennium Engineering www.tmeplano.com

ModBlocks Catalog
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories dBm input for PIN models and $\sim 210 \mathrm{mVpp}$ for APD models. See PDV receiver section of full ModBlock catalog for block diagrams and complete specifications for each model.

All models use single-mode fiber with FC/APC connectors. Internal user-replaceable "crash" cables are provided (laser input and probe port) on all models for repair convenience in case of optical connector damage. A front panel auxiliary DC output (SMA connector) is provided for optical input power level monitoring by external hardware. All models are packaged in a black 1.72 "H x 4.19 "W x 8.70 "D modular chassis allowing simple horizontal or vertical ModBlock stacking, are daisy-chain powered by 12 volts DC $\pm 3$ volts DC ( 9 to 15 VDC), and are computer controllable via Ethernet.

A front panel bi-color "Over/OK" LED monitors the optical input power level to the receiver. Green indicates optical input power exists and is within the normal operating range for the receiver. Red indicates optical input power exists, but is too high, risking receiver damage. Yellow indicates no (or too low) optical input power.

Front panel pushbuttons and a numeric readout provide manual attenuator (VOA) control and received optical power monitoring, which can also be used remotely. The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates Attenuator Control mode, green indicates Received Power monitor mode, and dark indicates off mode. Pushbuttons with up and down arrows allow attenuation adjustment for either mode indicated by the bi-color LED. The mode pushbutton is also used to turns the display off. Models with a "spotting" laser contain a 1 mW red laser, optical switch, and "Spot Enable" lighted pushbutton switch for use in visual alignment of probe to target prior to PDV use (which can also be remotely operated).

## F170A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, for PDV Back-Reflecting Probe F170A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, for PDV Back-Reflecting Probe

This analog receiver is designed for use in a 1550 nm Photonic Doppler Velocimeter coherent optical system that uses a back-reflecting (BR) probe. A coherent interferometer condition occurs at the BR probe tip due to Fresnel loss and reflected target light. The receiver contains a linear 10 GHz class PIN photodiode with transimpedance amplifier, preceded by a variable optical attenuator (VOA) and a 3-port circulator. The VOA is used to insure the receiver optical input power is within its operating range and especially to avoid receiver damage from excessive optical input power. All optical connections are FC/APC (angled tip) using single-mode fiber. Internal user-replaceable "crash" cables are provided (laser input and probe port) for repair

F175A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Back-Reflecting Probe

F175A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Back-Reflecting Probe

This analog receiver is designed for use in a 1550 nm Photonic Doppler Velocimeter coherent optical system that uses a back-reflecting (BR) probe. A coherent interferometer condition occurs at the BR probe tip due to Fresnel loss and reflected target light. The receiver contains a linear 10 GHz class PIN photodiode with transimpedance amplifier, preceded by a variable optical attenuator (VOA) and a 3-port circulator. The VOA is used to insure the receiver optical input power is within its operating range and especially to avoid receiver damage from excessive optical input power. All optical connections are FC/APC (angled tip) using single-mode

fiber. Internal user-replaceable "crash" cables are provided (laser input and probe port) for repair convenience in case of optical connector damage. The RF output is single-ended with choice of AC or DC coupled RF output. A front panel auxiliary DC output is provided for optical input power level monitoring by external hardware. See the Brief Specifications for PDV Receivers section starting on page 50 for front panel LED, switch, and numeric readout operation.

F177A-AC, Analog Receiver, PIN, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Non-Back-Reflecting Probe

F177A-DC, Analog Receiver, PIN, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Non-Back-Reflecting Probe

This analog receiver is designed for use in a 1550 nm Photonic Doppler Velocimeter coherent optical system that uses a non-back-reflecting (NBR) probe. The receiver contains a linear 10 GHz class PIN photodiode with transimpedance amplifier, preceded by a $50 \%$ coupler, variable optical attenuator (VOA), 3-port circulator, and a tap coupler. A coherent interferometer condition occurs in the 50\% coupler by combining the tapped laser input light and reflected target light from the NBR probe. The VOA is used to roughly match their amplitudes, insure the receiver optical input power is within its operating range, and especially to avoid receiver damage from excessive optical input power. All optical connections are FC/APC (angled tip) using single-mode fiber. Internal user-replaceable "crash" cables are provided (laser input and probe port) for repair convenience in case of optical connector damage. The RF output is single-ended with choice of AC or DC coupled RF output. A front panel auxiliary DC output is provided for optical input power level monitoring by external hardware. See the Brief Specifications for PDV Receivers section starting on page 50 for front panel LED, switch, and numeric readout operation.

## Custom PDV Receiver Equipment

TME can design, produce, and support any kind of custom PDV equipment required, including specialized research or developmental experimental equipment. An example 4-channel PDV receiver is shown below, which was built using customer specified fiber optic modules.

## Limiting Receivers

Analog fiber optic receiver ModBlocks with limiter amplifiers are offered for use in the 1310 nm and 1550 nm bands. PIN or APD photodiodes are used for models with 10 GHz class operation, which have single-ended AC-coupled RF outputs. PIN photodiodes are used for models with 2 GHz class operation, which have differential AC-coupled RF outputs. Models are offered with single mode (SM), 50 micron multimode (MM50), or 62.5 multimode (MM62.5 or MM62) fiber types.

F180A, Limiting Receiver, PIN, 10 GHz Class, Single-mode
F182A, Limiting Receiver, PIN, 10 GHz Class, 50 micron Multimode
F184A, Limiting Receiver, PIN, 10 GHz Class, 62.5 micron Multimode
Analog receivers with limiter amplifiers are offered with 10 GHz class PIN photodiodes for use in the 1310 nm and 1550 nm bands. They provide a constant RF output level over a wide range of input optical power levels. The logic $1 / 0$ decision point can be changed (usually done for small optical input signals) by adjusting the limiter threshold voltage. RF outputs are single-ended and AC coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ). Models are offered with single mode (SM), 50 micron multimode (MM50), or 62.5 multimode (MM62.5 or MM62) fiber types. An internal userreplaceable "crash" cable is provided (optical input) on all models for repair convenience in case of optical connector damage.

ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

A front panel bi-color "Over/OK" LED monitors the optical input power level. Green indicates optical input power exists and is within the normal operating range for the receiver. Red indicates optical input power exists, but is too high, risking receiver damage. Yellow indicates no (or too low) optical input power.

Front panel pushbuttons and a numeric readout provide limiter threshold voltage control and received optical power monitoring, which can also be used remotely. The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates Limiter Threshold control mode, green indicates Received Power monitor mode, and dark indicates off mode. Pushbuttons with up and down arrows allow attenuation adjustment for the yellow mode indicated by the bi-color LED. The mode pushbutton is also used to turns the display off.

F181A, Limiting Receiver, APD, 10 GHz Class, Single-mode
F181A front chassis view, graphics layout, and simple block diagram

This analog receiver has a 10 GHz class APD photodiode (with TIA) followed by a limiter amplifier for use in the 1310 nm and 1550 nm bands. It provides a constant RF output level over a wide range of input optical power levels. The logic $1 / 0$ decision point can be changed (usually done for small optical input signals) by adjusting the limiter threshold voltage. The RF output is single-ended and AC coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ). This model uses single mode (SM) fiber

ModBlocks Catalog
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories (multimode on request). An internal user-replaceable "crash" cable is provided (optical input) for repair convenience in case of optical connector damage.

A front panel bi-color "Over/OK" LED monitors the optical input power level. Green indicates optical input power exists and is within the normal operating range for the receiver. Red indicates optical input power exists, but is too high, risking receiver damage. Yellow indicates no (or too low) optical input power.

Front panel pushbuttons and a numeric readout provide limiter threshold voltage control and received optical power monitoring, which can also be used remotely. The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates Limiter Threshold control mode, green indicates Received Power monitor mode, and dark indicates off mode. Pushbuttons with up and down arrows allow attenuation adjustment for the yellow mode indicated by the bi-color LED. The mode pushbutton is also used to turns the display off.

## Digital Receivers

High-Speed Digital Logic ModBlock phase-locked loops (PLLs) are offered, including NRZ Clock-Data Recovery (CDR) PLLs in three data rate ranges from $10 \mathrm{Mb} / \mathrm{s}$ to $13 \mathrm{~Gb} / \mathrm{s}$. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3dB roll-off point). An internal user-replaceable "crash" cable is provided (optical input) on all models for repair convenience in case of optical connector damage. Other PLLs or DC-coupled PLLs can be provided on request (send an email request to ModBlocks@tmeplano.com).

## F200A, Digital Receiver, NRZ, PIN, 9-13 Gb/s, Single-mode

## F202A, Digital Receiver, NRZ, PIN, 9-13 Gb/s, 50 micron Multimode

F204A, Digital Receiver, NRZ, PIN, 9-13 Gb/s, 62.5 micron Multimode
These digital receivers contain a 10 GHz class PIN type fiber optic receiver and an NRZ clock-data recovery (CDR) PLL. The receiver output drives the CDR, which is designed to accept an NRZ data stream between 9 and $13 \mathrm{~Gb} / \mathrm{s}$. The CDR will lock on to the data stream (if possible), output a clock signal recovered from the data stream, and output the original data stream retimed by the recovered clock. The receiver output signal passes through a limiting amplifier to CDR circuitry, providing a wide NRZ optical input power range. The PLL accepts input data streams over a continuous range and acquires lock automatically in less than 50 milliseconds.

## Transceivers

These ModBlocks contain both a fiber optic transmitter and a fiber optic receiver in one unit. Pluggable SFP transceivers are currently offered with O-E plus E-O functions and with O-O functions. NRZ and RZ transceivers for the $10 \mathrm{~Gb} / \mathrm{s}$ class will be offered in the near future. Send an email request to ModBlocks@tmeplano.com to make it sooner!

## F220A, Transceiver, SFP, 0-to-E and E-to-O

This transceiver accepts a pluggable SFP transceiver module and provides an AC-coupled ( $0.1 \mathrm{uF}, \sim 35 \mathrm{KHz}$ ), differential (usable single-ended), RF electrical I/O interface to the SFP module.

Third Millennium Engineering www.tmeplano.com
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
A laser enable switch is provided. A bi-color LED provides received signal status, where green indicates normal received signal level ("Norm") and yellow indicates loss of signal ("LOS").

F220A front chassis view, graphics layout, and simple block diagram

A wide variety of fiber optic and "copper" SFP modules are available from many suppliers, so these transceivers are offered without SFP modules installed. However, selected popular fiber optic (850 nm, $1310 \mathrm{~nm}, 1550$ ) and "copper" SFP modules are offered for convenience as a ModBlock Accessory (see page 184).

## F221A, Transceiver, SFP, 0-to-0

This transceiver accepts a pluggable SFP transceiver module and internally connects the SFP transmitter electrical port to the receiver electrical port. This arrangement is useful as a wavelength converter or as a regenerator. A laser enable switch is provided. A bi-color LED provides received signal status, where green indicates normal received signal level ("Norm") and yellow indicates loss of signal ("LOS").

## PDV Transceivers

Fiber optic transceiver ModBlocks are offered for Photonic Doppler Velocimeter (PDV) applications in the 1550 nm C-band. A PDV transceiver ModBlock contains an internal 20 mW coherent laser, a 10 GHz class analog PDV receiver, and a red "spotting" laser. A complete PDV front end can be conveniently implemented by connecting a probe to a transceiver. Models are available with choices of AC or DC coupled RF outputs and for use with back-reflecting or non-back-reflecting probes. Models with APD-TIA receivers, 50 mW coherent lasers, or without the spotting laser can be provided on request.

Summary of PDV Transceiver ModBlock Types

| Model <br> Number | Receiver <br> Type | RF Output <br> Coupling | Probe <br> Type | Spotting <br> Laser? |
| :---: | :---: | :---: | :---: | :---: |
| F235A | PIN-TIA | AC | Back-Reflecting | Yes |
| F236A | PIN-TIA | DC | Back-Reflecting | Yes |
| F237A | PIN-TIA | AC | Non-Back-Reflecting | Yes |
| F238A | PIN-TIA | DC | Non-Back-Reflecting | Yes |

## Brief Specifications for PDV Transceivers

All PDV transceivers contain an analog 10 GHz bandwidth PIN-TIA fiber optic receiver for C-band (1528 to 1563 nm ) operation with AC or DC coupled RF output, a 20 mW InGaAsP DFB laser with a 40 meter coherence length ( 5 MHz line width), and a 1 mW red "spotting" laser. Model architectures are provided ( 30 dB VOAs, couplers, circulators, red laser, switch) for use with backreflecting or non-back-reflecting probes. Target velocity range is 0 to $7500 \mathrm{~m} / \mathrm{s}$ (DC coupled) or 0.05 to $7500 \mathrm{~m} / \mathrm{s}$ (AC coupled, $\sim 35 \mathrm{KHz}$ cutoff). Probe coherent laser output power is 15 mW or +12 dBm and red "spotting" laser output power is 1 mW or 0 dBm . Both laser power levels are fixed to these levels and can be turned off with front panel "enable" controls (or remotely).

For back-reflecting (BR) probe model types, the probe port reflected input power ranges from 5 to 35 dBm maximum to -18 dBm minimum, depending on VOA setting. RF output voltage is $\sim 715 \mathrm{mVpp} @ 0 \mathrm{dBm}$ input. For non-back-reflecting (NBR) probe model types, the probe port reflected input power range is 7 dBm maximum to -15 dBm minimum. RF output voltage is $\sim 536$ mVpp @ 0 dBm input. See PDV transceiver section of full ModBlock catalog for block diagrams and complete specifications for each model.

All models use single-mode fiber with FC/APC connectors. An internal user-replaceable "crash" cable is provided (probe port) on all models for repair convenience in case of optical connector damage. A front panel auxiliary DC output is provided for optical input power level monitoring by external hardware. All models are packaged in a black 1.72 " $\mathrm{H} \times 8.38$ " $\mathrm{W} \times 8.70$ " D modular chassis allowing simple horizontal or vertical ModBlock stacking, are daisy-chain powered by 12 volts DC $\pm 3$ volts DC ( 9 to 15 VDC), and are computer controllable via Ethernet.

A front panel bi-color "Over/OK" LED monitors the optical input power level to the receiver. Green indicates optical input power exists and is within the normal operating range for the receiver. Red indicates optical input power exists, but is too high, risking receiver damage. Yellow indicates no (or too low) optical input power.

Front panel pushbuttons and a numeric readout provide manual attenuator (VOA) control and received optical power monitoring, which can also be used remotely. The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates Attenuator Control mode, green indicates Received Power monitor mode, and dark indicates off mode. Pushbuttons with up and down arrows allow attenuation adjustment for either mode indicated by the bi-color LED. The mode pushbutton is also used to turns the display off. An optical switch and "Spot Enable" lighted pushbutton switch controls the internal red "spotting" laser, which is used in visual alignment of probe to target prior to PDV use (which can also be remotely operated).

## F235A, Transceiver, Laser-PIN, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Back-Reflecting Probe

## F236A, Transceiver, Laser-PIN, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Back-Reflecting Probe

This PDV transceiver ModBlock type is designed for use in a 1550 nm Photonic Doppler Velocimeter coherent optical system that uses a back-reflecting (BR) probe. It contains both an internal 20 mW (optional 50 mW ) 1550 nm coherent laser (thermally stabilized) and an analog PDV PIN receiver (similar to F175A). A coherent interferometer condition occurs at the BR probe tip due to Fresnel loss and reflected target light. The receiver contains a linear 10 GHz class PIN photodiode with transimpedance amplifier, preceded by a variable optical attenuator (VOA) and a 3-port circulator. The VOA is used to insure the receiver optical input power is within its operating range and especially to avoid receiver damage from excessive optical input power. All optical connections are FC/APC (angled tip) using single-mode fiber. An internal user-replaceable "crash" cable is provided (probe port) for repair convenience in case of optical connector damage. The RF output is single-ended with choice of AC or DC coupled RF output. A front panel auxiliary DC output is provided for optical input power level monitoring by external hardware.

The laser is fixed at its maximum optical output power and a "Laser Enable" lighted pushbutton switch is provided (can also be remotely operated). A red "spotting" laser, optical switch, and "Spot Enable" lighted pushbutton switch are provided for use in visual alignment of probe to target prior to PDV use (which can also be remotely operated). See the Brief Specifications for PDV Transceivers section starting on page 91 for front panel LED, switch, and numeric readout operation.

F237A, Transceiver, Laser-PIN, 10 GHz Class, AC-coupled, with Red Spotting Laser, for PDV Non-Back-Reflecting Probe

## F238A, Transceiver, Laser-PIN, 10 GHz Class, DC-coupled, with Red Spotting Laser, for PDV Non-Back-Reflecting Probe

This PDV transceiver ModBlock type is designed for use in a 1550 nm Photonic Doppler Velocimeter coherent optical system that uses a non-back-reflecting (NBR) probe. It contains both an internal 20 mW ( 50 mW optional) 1550 nm coherent laser (thermally stabilized) and an analog PDV PIN receiver (similar to F175A). Coherent laser light emitted from the probe reflects back from the target where it is combined with a coupler tapped small portion of the original laser light, forming a coherent interferometer condition. The VOA is used to roughly balance the reflected target optical input power with the tapped original laser light. The receiver contains a linear 10 GHz class PIN photodiode with transimpedance amplifier, preceded by a variable optical attenuator (VOA) and a 3-port circulator. All optical connections are FC/APC (angled tip) using single-mode fiber. An internal user-replaceable "crash" cable is provided (probe port) for repair convenience in case of optical connector damage. The RF output is single-ended with choice of AC or DC coupled RF output. A front panel auxiliary DC output is provided for optical input power level monitoring by external hardware.

The laser is fixed at its maximum optical output power and a "Laser Enable" lighted pushbutton switch is provided (can also be remotely operated). A red "spotting" laser, optical switch, and "Spot Enable" lighted pushbutton switch are provided for use in visual alignment of probe to target prior to PDV use (which can also be remotely operated). See the Brief Specifications for PDV Transceivers section starting on page 91 for front panel LED, switch, and numeric readout operation.

## Custom PDV Transceiver Equipment

TME can design, produce, and support any kind of custom PDV equipment required, including specialized research or developmental experimental equipment. An example 4-channel PDV receiver is shown below, which was built using customer specified fiber optic modules.

Third Millennium Engineering www.tmeplano.com

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## Switches

Fiber optic switch ModBlocks are offered using prism-collimator technology or other patented technologies for $850 \mathrm{~nm}, 1310 \mathrm{~nm}$, and 1550 nm bands. SPDT and $2 x 2$ (i.e., transfer) switches are offered in single or dual channel versions and with choice of single-mode (SM), single-mode polarized (PM), 50 micron multimode (MM50), or 62.5 micron multimode (MM62.5 or MM62) fiber. SP4T and SP8T switches are offered with one channel and single-mode fiber. All switches use front panel FC/UPC fiber optic connectors, unless otherwise specified. Internal "crash" cables are not provided but can be added upon request at extra cost. Many other switch types and technologies are available. Send an email request to ModBlocks@tmeplano.com if you don't see the switch or performance you need.

## F240A-*, Switch, Dual SPDT, Single-mode

F241A-*, Switch, Single SPDT, Single-mode

## F250A-*, Switch, Dual SPDT, 50 micron Multimode

## F251A-*, Switch, Single SPDT, 50 micron Multimode

F255A-*, Switch, Dual SPDT, 62.5 micron Multimode

## F256A-*, Switch, Single SPDT, 62.5 micron Multimode

These ModBlock switches contain one or two SPDT fiber optic switches and related circuitry, with choice of single-mode (SM), 50 micron multimode (MM50), or 62.5 micron multimode (MM62.5 or MM62) fiber. The front panel lighted pushbutton provides toggle operation of the switch and also indicates the switch state. When the switch indicator is off, the fiber optic switch is in its normal state, as shown in the simple block diagram (COM $\rightarrow \mathrm{NC}$ ). When the switch indicator is on (green), the fiber optic switch is in its alternate state (COM $\rightarrow \mathrm{NO}$ ).

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
F243A-* front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 8.7" deep

These ModBlock switches contain one or two SPDT fiber optic switches and related circuitry, with single-mode polarization-maintaining (PM) fiber (slow axis aligned to connector key). The front panel lighted pushbutton provides toggle operation of the switch and also indicates the switch state. When the switch indicator is off, the fiber optic switch is in its normal state, as shown in the simple block diagram (COM $\rightarrow N C$ ). When the switch indicator is on (green), the fiber optic switch is in its alternate state ( $\mathrm{COM} \rightarrow \mathrm{NO}$ ).

## F260A-*, Switch, SP4T, Single-mode

This ModBlock switch contains one SP4T fiber optic switch and related circuitry, using single-mode (SM) fiber. Two front panel lighted pushbutton switches are used for manual selection of the switch position using a classic 2-bit binary code, as shown in the block diagram. A SP4T switch with polarization-maintaining SM fiber is available on request.

## F265A-*, Switch, SP8T, Single-mode

This ModBlock switches contains one SP8T fiber optic switch and related circuitry, using single-mode (SM) fiber. A SP8T switch with polarization-maintaining SM fiber is available on request. The 8 front panel lighted pushbutton switches provide "radio button" manual operation of the switch and also indicates the switch position (by either manual or remote operation). The switch is in position 1 by default. When a numbered switch is turned on by pressing the pushbutton or by remote control (indicator = green), COM is connected to the corresponding numbered port. When a numbered switch indicator is on and then a different numbered switch is turned on (by pressing a different pushbutton or by remote control), then COM is disconnected from the original port and re-connected to the new port ("radio button" operation) and the switch indicators change accordingly.

## Amplifiers

Optical amplifier ModBlocks are offered for the O, S, C, and L bands, including an erbium doped fiber amplifier (EDFA) and several semiconductor optical amplifiers (SOA). These amplifiers are bit-rate independent. Many different optical amplifiers are available in the market. Send an email request to ModBlocks@tmeplano.com if you don't see the amplifier or performance you need. Chassis rear views are shown in the "Common Packaging Data" section on page 186. Price and delivery are shown in the "Domestic USA Pricing" section starting on page 199.

F270A, Optical Amplifier, EDFA, Variable Gain/Power, DWDM C-Band F270A front chassis view, graphics layout, and simple block diagram

This EDFA optical amplifier ModBlock operates in the C-band for DWDM signals, using single-mode fiber. The amplifier can be operated in a constant output power (up to +15 dBm ) or constant gain mode (up to 25 dB ), where the power/gain is adjustable. Internal user-replaceable "crash" cables are provided (optical input and output) for repair convenience in case of optical connector damage.

Front panel pushbuttons and a numeric readout provide manual control of amplifier output power or gain and monitoring of input and output power levels (which can also be operated remotely). The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Red indicates Power/Gain control mode, yellow indicates Output Power monitoring mode, green indicates Input Power monitoring mode, and dark indicates off mode. Pushbuttons with up and down arrows allow power or gain adjustment when the bi-color LED is red. The mode pushbutton turns the display on or off.

Front panel switches select constant power or constant gain operating mode (green = power, dark = gain), output enable, and output mute ("eye-safe", $\sim+10 \mathrm{dBm}$ ). A front panel bi-color LED monitors the input signal presence. Green indicates optical input power exists and is within the normal operating range for the amplifier. Yellow indicates loss of optical input power. A second front panel bi-color LED monitors EDFA alarms (green = OK, yellow = warning, red = alarm). Alarms include loss of signal, low output power, EDFA pump temperature, pump bias end of life, and excess output reflection.

## F275A-*, Optical Amplifier, SOA

Semiconductor optical amplifier (SOA) ModBlocks are offered for the O-band and C-band, using single-mode fiber. Amplifier operating current can be adjustable to vary the gain. These SOAs are thermally stabilized and use single mode fiber (polarization-maintaining fiber types available upon request). The output power is adjustable and a SOA enable switch is provided. Internal user-replaceable "crash" cables are provided (optical input and output) for repair convenience in case of optical connector damage.

Front panel pushbuttons and a numeric readout provide manual control of the SOA current (for output power level control), which can also be operated remotely. The mode pushbutton turns the display on or off. Pushbuttons with up and down arrows allow adjustment of the SOA current when the display is on.

## Phase Shifters

## Variable Attenuators

Coming soon! Send an email request to ModBlocks@tmeplano.com to make it sooner!

## Passive Devices

A variety of passive fiber optic ModBlocks are offered, including couplers, circulators, isolators, and wavelength splitters. 0.5U ModBlocks require a side panel kit (A430A on page 184) in order to fasten them to other ModBlocks. These ModBlocks use FC/UPC connectors by default, but can be built using FC/APC connectors upon request. Internal "crash" cables are not provided but can be added upon request at extra cost. Many different passive devices are available in the market. Send an email request to ModBlocks@tmeplano.com if you don't see the device or performance you need. Price and delivery are shown in the "Domestic USA Pricing" section starting on page 199.

F310A-*, Coupler, 1x2, Single-mode
F320A-*, Coupler, 1x2, 50 micron Multimode

## F322A-*, Coupler, 1x2, 62.5 micron Multimode

Passive fiber optic ModBlock $1 \times 2$ couplers are offered, with choice of single-mode (SM), 50 micron multimode (MM50), or 62.5 micron multimode (MM62.5 or MM62) fiber. Coupling ratios vary from $50 \% / 50 \%$ (splitters) to $1 \% / 99 \%$ (taps). Couplers can be used to split an incoming light source into two parts or to combine two light sources into a single part.

F340A SM 16-Channel 100 GHz DWDM Splitter

A passive fiber optic ModBlock DWDM wavelength splitter is offered, using single-mode (SM) fiber. This model has 16-channels on 100 GHz spacing in the C-band, with user-specified starting channel (such as C59, C43, or C27, etc.). See the "ITU Fiber Optic Frequencies, Wavelengths, and Channels for C and L bands" section on page 189 of the "Reference Data" section for the proper channel number ( $\mathrm{C}^{*}$ codes only) to use when ordering. CWDM splitters (2, $4,8,16$ channels) are also available upon request.

## Miscellaneous

A variety of miscellaneous ModBlocks are offered, including Super-Luminescent LEDs, optical channel monitors, polarization controllers, polarization scramblers, differential group delay lines, and tunable filters.

## F330A-*, LED, Super-Luminescent,

Super-Luminescent LED (SLED) ModBlocks are provided for the 1310 nm and 1550 nm region. These SLEDs are thermally stabilized and use single mode fiber (polarization-maintaining fiber types available upon request). The output power is adjustable and a SLED enable switch is provided. An internal user-replaceable "crash" cable is provided (optical output) for repair convenience in case of optical connector damage. SLEDs are a broadband light source and can be used for chromatic dispersion measurement, fiber optic sensors, and biomedical applications (OCT, imaging, healing, etc.).

Third Millennium Engineering www.tmeplano.com

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

F330A-* front chassis view, graphics layout, and simple block diagram

Front panel pushbuttons and a numeric readout provide manual control of the SLED current (for output power level control), which can also be operated remotely. The mode pushbutton turns the display on or off. Pushbuttons with up and down arrows allow adjustment of the SLED current when the display is on.

Coming soon! Send an email request to ModBlocks@tmeplano.com to make it sooner!

A variety of microwave ModBlocks are offered, including switches, amplifiers, phase shifters, attenuators, oscillators, mixers, and miscellaneous items. Chassis rear views are shown in the "Common Packaging Data" section on page 186. Price and delivery are shown in the "Domestic USA Pricing" section starting on page 199.

## Switches

Microwave switch ModBlocks are provided using movable contact latching relays. The 50ohm relays are rated for DC to 18 GHz or DC to 26.5 GHz operation and have SMA connectors. Single and dual channel ModBlocks are provided in $1 \mathrm{U} \frac{1}{4}$ rack enclosures for SPDT (unterminated and terminated), transfer, and 2P3T switches. Single channel ModBlocks are provided in $2 \mathrm{U} 1 / 4$ rack enclosures for SP4T and SP6T switches in either terminated or unterminated types.

## M110A, Switch, Transfer, 18 GHz

This ModBlock switch contains one microwave transfer relay and related circuitry. The front panel lighted pushbutton provides toggle operation of the relay and also indicates the relay state. When the switch indicator is off, the relay is in its normal state, as shown in the simple block diagram (1Port $\rightarrow$ 2Port, 3Port $\rightarrow$ 4Port). When the switch indicator is on (green), the relay is in its alternate state (1Port $\rightarrow$ 3Port, 2Port $\rightarrow 4$ Port).

M122A, Switch, Dual 2P3T, 26.5 GHz
M123A, Switch, Single 2P3T, 26.5 GHz
These ModBlock switches contain one or two microwave relays and related circuitry, with choice of DC to 18 GHz or DC to 26.5 GHz bandwidths. Each front panel lighted pushbutton provides toggle operation of its corresponding relay and also indicates the relay state. When the switch indicator is off, the relay is in its normal state, as shown in the simple block diagram (2Port $\rightarrow$ 3Port, 4Port $\rightarrow 5$ Port). When the switch indicator is on (green), the relay is in its alternate state (2Port $\rightarrow$ 1Port, 4Port $\rightarrow$ 3Port). This switch type is often used as a transfer switch by using 2Port and 3Port as the main path, 1Port and 5Port as the insertion path, and 4Port terminated.

M130A, Switch, SP4T, 18 GHz
M131A, Switch, SP4T, 18 GHz, Terminated
M135A, Switch, SP4T, 26.5 GHz

## M136A, Switch, SP4T, 26.5 GHz, Terminated

These ModBlock switches contain one SP4T microwave relay and related circuitry, with choice of DC to 18 GHz or DC to 26.5 GHz bandwidths. Each front panel lighted pushbutton provides both toggle and "radio button" manual operation of the relay and also indicates the relay switch position (by either manual or remote operation).

- When all switch indicators are off, the relay makes no connection from any port to COM (COM is open circuit). All 4 ports are either open circuit (M130A and M135A) or terminated by a 50ohm microwave resistor (M131A and M136A), as shown in the simple block diagrams.
- When a numbered switch indicator is turned on (green) by pressing the pushbutton or by remote control, COM is connected to the corresponding numbered port. All other ports are either open circuit (M130A and M135A) or 50-ohm terminated (M131A and M136A). If the same numbered switch indicator is turned off again (by pressing the pushbutton again or by remote control), COM is disconnected from the corresponding numbered port (toggle operation) leaving all switch indicators off (see previous case).
- When a numbered switch indicator is on and then a different numbered switch indicator is turned on (by pressing a different pushbutton or by remote control), COM is disconnected from the original port and re-connected to the new port ("radio button" operation).

ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## Amplifiers

A variety of microwave amplifier ModBlocks are offered, including linear amplifiers, limiting amplifiers, and modulator drivers. Linear amplifiers are offered in 1, 2, or 4 channel models with bandwidths from 50 KHz to 18 GHz and single-ended AC-coupled inputs and outputs. Limiting amplifiers are offered for $2.5 \mathrm{~Gb} / \mathrm{s}$ and $10 \mathrm{~Gb} /$ s class operation with differential inputs and outputs. Limiting amplifier ModBlocks can be used as single-ended to differential converters or differential to single-ended converters. All limiting amplifier ModBlocks inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). A $10 \mathrm{~Gb} / \mathrm{s}$ class modulator driver is offered with single-ended AC-coupled inputs and outputs. Chassis rear views are shown in the "Common Packaging Data" section on page 186. Price and delivery are shown in the "Domestic USA Pricing" section starting on page 199.

## M201A-*, Linear Amplifier, Single Channel

## M202A-*, Linear Amplifier, Dual Channel

## M204A-*, Linear Amplifier, Quad Channel

These ModBlocks contain one, two, or four linear microwave amplifiers and related circuitry. Amplifiers choices are listed in the table below and are the same type for dual and quad versions. Types can be mixed or other amplifiers choices can be used upon user request. Send requests by email to ModBlocks@tmeplano.com.

Linear amplifier choices

| Part Number |  |  | Main <br> Sual |  | Quad |  | Features |
| :---: | :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: |

Notes: "Pout" is at the 1 dB gain compression point. "F-lo" is the -3 dB low frequency cutoff point. "F-hi" is the -3 dB high frequency cutoff point. "NF" means noise figure.

ModBlocks Catalog
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

This limiting amplifier ModBlock accepts a wide range of analog, data, or clock input signal levels and produces a constant digital output signal level up to $2.5 \mathrm{~Gb} / \mathrm{s}$ (typical). The amplifier has a 100 ohm differential input and 50 ohm complementary single ended outputs, both AC-coupled. When used single-ended, unused inputs or outputs should be terminated with a 50 -ohm load (see Signal Adapters starting on page 180). The amplifier can be used as a single-ended to differential converter or differential to single-ended converter. A front panel bi-color LED indicates the presence of an input signal (green=OK) or loss of input signal (yellow=LOS) and a lighted pushbutton controls output polarity (norm=off, invert=on).

## M207A, Limiting Amplifier, 10 Gb/s Class

This limiting amplifier ModBlock accepts a wide range of analog, data, or clock input signal levels and produces a constant digital output signal level up to $10 \mathrm{~Gb} / \mathrm{s}$ (typical). The amplifier has

Third Millennium Engineering www.tmeplano.com

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

AC-coupled 50 ohm complementary single ended inputs and outputs. When used single-ended, unused inputs or outputs should be terminated with a 50 -ohm load (see Signal Adapters starting on page 180). The amplifier can be used as a single-ended to differential converter or differential to single-ended converter.

Front panel pushbuttons and a numeric readout provide manual control of the output voltage level and the input offset level (logic decision threshold), which can also be operated remotely. The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates Output Level control mode, green indicates Input Offset control mode, and dark indicates off mode. Pushbuttons with up and down arrows allow parameter adjustment for the mode indicated by the bi-color LED.

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## High-Speed Logic

A variety of high-speed digital Logic ModBlocks are offered, including gates, fan-outs, selectors, pre-scalers, flip-flops, time delays, encoders, and phase-locked loops (PLLs). All models have differential inputs and outputs, which can be used single-ended or differentially. When used single-ended, unused inputs or outputs should be terminated with a 50 -ohm load (see Signal Adapters starting on page 180). All Logic ModBlocks can be used as single-ended to differential converters or differential to single-ended converters. All Logic ModBlock inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency cutoff). All models can be ordered DC-coupled if required. Chassis rear views are shown in the "Common Packaging Data" section on page 186. Price and delivery are shown in the "Domestic USA Pricing" section starting on page 199.

## Common Specifications

Unless otherwise specified, the following key specifications apply to all Logic ModBlock models.

Key Specifications

| Parameter | Value | Units | Qualifier |
| :--- | :---: | :---: | :--- |
| Channels | 1 | - | - |
| Connectors | SMA female | - | - |
| Impedance | 50 | ohms | nominal |
| l/O Coupling | $\mathrm{AC}, 0.1 \mathrm{uF}$ | - |  |
| Low Frequency Cutoff | 35 | KHz | -3 dB point, typical |
| High Frequency Cutoff | 13 | GHz | -3 dB point, typical |
| Internal Termination | 50 ohms | - | - |
| Input Voltage Range, | 300 | mVpp | Minimum <br> Differential |
| Input Voltage, absolute maximum, | 1000 |  | Maximum |
| Differential | 2.5 | Vpp | Damage threshold |
| Output Voltage, | 900 | mVpp | Minimum |
| Differential | 1100 | Typical |  |
| Input Return Loss, single-ended | 10 | dB | Minimum, @ 13 GHz |
| Output Return Loss, single-ended | 10 | dB | Minimum, @ 13 GHz |
| Output Transition Time | 30 | ps | Typical |
| Jitter, deterministic | 6 | ps | Typical |
| Jitter, random | 2 | ps RMS | Typical |
| Dimensions |  |  |  |

## Gates

High-Speed Digital Logic ModBlock gates are offered, including 13 GHz class AND/NAND/OR/NOR and XOR/XNOR gates. These gates will operate with data or clock signals. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off

Third Millennium Engineering www.tmeplano.com

ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories point). Other gates, 25 GHz class gates, or DC-coupled gates can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L100A, Gate, AND/NAND/OR/NOR, 13 GHz Class

This gate can perform single-ended or differential AND, NAND, OR, or NOR logic functions on data or clock signals, depending upon how the inputs and outputs are connected. Connections are shown in the figure below.

## L100A connections for AND, NAND, OR, and NOR logic functions

1U, quarter-rack, 4.7" deep

## L101A, Gate, XOR/XNOR, 13 GHz Class

This gate can perform single-ended or differential XOR or XNOR logic functions on data or clock signals, depending upon how the outputs are connected. Connections are shown in the figure below.

L101A connections for XOR and XNOR logic functions

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories L101A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## Fan-out Buffers

High-Speed Digital Logic ModBlock fan-out buffers are offered, including 13 GHz class 1-to2 and 1-to-4 fan-outs. These buffers will operate with data or clock signals. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other fanouts, 25 GHz class fan-outs, or DC-coupled fan-outs can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L110A, Fan-out Buffer, 1:2, 13 GHz Class

This fan-out buffer accepts a logic input from a data or clock signal and delivers two identical non-inverted logic outputs.

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
L110A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## L111A, Fan-out Buffer, 1:4, 13 GHz Class

This fan-out buffer accepts a logic input from a data or clock signal and delivers four identical non-inverted logic outputs.

L111A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## Data Selectors

High-Speed Digital Logic ModBlock data selectors are offered, including 13 GHz class 2-to1 and 4-to-1 selectors. These selectors will operate with data or clock signals. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other selectors, 25 GHz class selectors, or DC-coupled selectors can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L120A, Data Selector, 2:1, 13 GHz Class

This data selector accepts two logic inputs from data or clock signals and selects one of them to deliver a non-inverted logic output.

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
L120A front chassis view, graphics layout, and simple block diagram

## L121A, Data Selector, 4:1, 13 GHz Class

This data selector accepts four logic inputs from data or clock signals and selects one of them to deliver a non-inverted logic output. Two lighted pushbutton switches are used for manual input selection using a classic 2-bit binary code, as shown in the block diagram.

## Pre-Scalers

High-Speed Digital Logic ModBlock pre-scalers (dividers) are offered, including 13 GHz class 2-to-1 and 4-to-1 selectors. These pre-scalers will operate with data or clock signals. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other pre-scalers, 25 GHz class pre-scalers, or DC-coupled pre-scalers can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L130A, Pre-Scaler, Divide by $2,13 \mathrm{GHz}$ Class

This pre-scaler accepts a logic input from a data or clock signal and divides it by two to deliver a non-inverted logic output.

1U, quarter-rack, 4.7" deep

## L131A, Pre-Scaler, Divide by 4, 13 GHz Class

This pre-scaler accepts a logic input from a data or clock signal and divides it by four to deliver a non-inverted logic output.

## L131A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## L132A, Pre-Scaler, Divide by 8, 13 GHz Class

This pre-scaler accepts a logic input from a data or clock signal and divides it by eight to deliver a non-inverted logic output.

L132A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## L133A, Pre-Scaler, Divide by 1-2-4-8, 13 GHz Class

This pre-scaler accepts a logic input from a data or clock signal and divides it by one, two, four, or eight to deliver a non-inverted logic output. Two lighted pushbutton switches are used for manual selection of the divisor value by using a classic 2-bit binary code.

## Flip-Flops

High-Speed Digital Logic ModBlock flip-flops are offered, including 13 GHz toggle and Dtype flip-flops. These flip-flops will operate with data or clock signals. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other flip-flops, 25 GHz class flip-flops, or DC-coupled flip-flops can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L140A, Flip-Flop, Toggle Type, 13 GHz Class

This flip-flop accepts a logic input from a data or clock signal and divides it by two (toggle function) to deliver a non-inverted logic output. A toggle occurs on the rising edge of the input signal. By reversing the input polarity, a toggle occurs on the falling edge of the clock.

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories
L140A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## L141A, Flip-Flop, D-Type, 13 GHz Class

This flip-flop accepts logic inputs from a data signal and a clock signal and delivers a noninverted logic output. Input data is transferred to the output on the rising edge of the clock. By reversing the clock input polarity, input data is transferred to the output on the falling edge of the clock.

## Time Delays

High-Speed Digital Logic ModBlock time delays are offered, currently including a 0 to 120 picosecond time delay. These time delays will operate with data or clock signals. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other time delays or DC-coupled time delays can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L150A, Time Delay, 0-120 ps, 13 GHz Class

This time delay accepts a logic input from a data or clock signal, adds 0 to 120 picoseconds of time delay to the signal, and delivers a non-inverted logic output. Front panel pushbuttons and a numeric readout provide manual control of the delay time in 1 picosecond increments (which can also be operated remotely). The mode pushbutton allows the display to be turned on or off. Pushbuttons with up and down arrows allow the user to adjust the time delay when the display is on.

1U, quarter-rack, 4.7" deep

## Encoders

High-Speed Digital Logic ModBlock encoders are offered, including a differential (DPSK) encoder and an NRZ to RZ encoder, with or without a built-in 0 to 120 picosecond clock time delay. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other encoders or DC-coupled encoders can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L160A, Encoder, Differential (DPSK), 13 GHz Class

## L161A, Encoder, Differential (DPSK), 13 GHz Class, with 0-120 ps Clock Delay

These encoders accept data and clock logic inputs, perform modulo-two addition of the current data input bit with the previous data output bit, and deliver a non-inverted logic output. Input data is retimed before encoding to provide a large phase margin ( $290^{\circ}$ typical @ $12.5 \mathrm{~Gb} / \mathrm{s}$ ). These encoders operate on the rising edge of the clock (a.k.a. DSPK1). By reversing the clock input polarity, these encoders operate on the falling edge of the clock (a.k.a. DPSKO). These encoders are normally used for Differential Phase-Shift Keying (DPSK) and Duo-Binary (DB) applications.

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

Encoder operation is based upon the well-known differential encoder equation Dout $_{k}=$ Dout $_{k-1} \oplus \operatorname{Din}_{k-1}$ (as modified by the input data re-timing), which is shown in the truth table below. The parameter " $k$ " refers to the logic level during a bit period.

## L160A and L161A differential encoder truth table

| Dtin $_{k-1}$ | Dtout $_{k-1}$ | Dtout $_{\mathbf{k}}$ |
| :---: | :---: | :---: |
| 0 | 0 | 0 |
| 0 | 1 | 1 |
| 1 | 0 | 1 |
| 1 | 1 | 0 |

The L161A is the same as the L160A, excepting that a 0 to 120 picoseconds clock time delay has been added for phase margin control. Front panel pushbuttons and a numeric readout provide manual control of the delay time in 1 picosecond increments (which can also be operated remotely). The mode pushbutton allows the display to be turned on or off. Pushbuttons with up and down arrows allow the user to adjust the time delay when the display is on.

## L160A front chassis view, graphics layout, and simple block diagram

L161A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## L162A, Encoder, NRZ to RZ, 13 GHz Class

## L163A, Encoder, NRZ to RZ, 13 GHz Class, with $\mathbf{0 - 1 2 0}$ ps Clock Delay

These encoders accept data and clock logic inputs, re-time the incoming data, generate an RZ pulse, and deliver the pulse as a non-inverted logic output. Input data is retimed before encoding to provide a large phase margin ( $270^{\circ}$ typical @ $10 \mathrm{~Gb} / \mathrm{s}$ ). These encoders operate on the falling edge of the clock. By reversing the clock input polarity, these encoders operate on the rising edge of the clock. These encoders are normally used with a lithium niobate modulator to generate an optical RZ signal.

Encoder operation is shown in the truth table below. The parameter " $k$ " refers to the logic level during a bit period. "RZ" means a return-to-zero pulse $(0 \rightarrow 1 \rightarrow 0$ within 1 clock period and "R1" means a return-to-one pulse ( $1 \rightarrow 0 \rightarrow 1$ within 1 clock period).

L162A and L163A NRZ to RZ truth table

| Dtin $_{\mathbf{k}-\mathbf{1}}$ | CLKin $^{2}$ | Dtout-P $_{\mathbf{k}}$ | Dtout- $_{\mathbf{k}}$ |
| :---: | :---: | :---: | :---: |
| 0 | $1 \rightarrow 0$ | 0 | 1 |
| 1 | $1 \rightarrow 0$ | RZ | $R 1$ |

Front panel pushbuttons and a numeric readout provide manual control of the RZ pulse width. The RZ pulse width can be changed from 33\% (~0.2 VDC) to 50\% ( $\sim 0.8 \mathrm{VDC}$ ) to $60 \%(\sim 1.2$ VDC) in $1 \%$ increments (which can also be operated remotely). The mode pushbutton allows the display to be turned on or off. Pushbuttons with up and down arrows allow the user to adjust the RZ pulse width when the display is on.

The L163A is the same as the L162A, excepting that a 0 to 120 picoseconds clock time delay has been added for phase margin control. Front panel pushbuttons and a numeric readout provide manual control of the delay time in 1 picosecond increments (which can also be operated remotely). The mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates RZ pulse width control mode, green indicates clock time delay mode, and dark indicates off mode. Pushbuttons with up and down arrows allow parameter adjustment for the mode indicated by the bi-color LED.

L162A front chassis view, graphics layout, and simple block diagram

L163A front chassis view, graphics layout, and simple block diagram

1U, quarter-rack, 4.7" deep

## Phase Locked Loops

High-Speed Digital Logic ModBlock phase-locked loops (PLLs) are offered, including NRZ Clock-Data Recovery (CDR) PLLs in three data rate ranges from $10 \mathrm{Mb} / \mathrm{s}$ to $13 \mathrm{~Gb} / \mathrm{s}$. All inputs and outputs are AC-coupled with a 0.1 uF capacitor ( $\sim 35 \mathrm{KHz}$ low frequency -3 dB roll-off point). Other PLLs or DC-coupled PLLs can be provided on request (send an email request to ModBlocks@tmeplano.com).

## L200A, PLL, NRZ Clock-Data Recovery, 10Mb/s-2.7 Gb/s

## L201A, PLL, NRZ Clock-Data Recovery, 2.5-10.8 Gb/s

## L202A, PLL, NRZ Clock-Data Recovery, 9-13 Gb/s

These clock-data recovery PLLs accept an NRZ data stream at their inputs, lock on to the data stream (if possible), and output a clock signal recovered from the data stream and the original data stream retimed by the recovered clock. Input data passes through a limiting amplifier to CDR circuitry, providing a wide NRZ input voltage range ( 10 to 1000 mVpp ). The PLL accepts input data streams over a continuous range (according to the model) and acquires lock automatically in

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories less than 50 milliseconds. Output rise and fall times are $\sim 100 \mathrm{ps}$ for the M200A. Otherwise, Common Specifications on page 155 apply, excepting for the chassis dimensions shown below.

Front panel bi-color LEDs indicate the input signal level (green = OK, yellow = loss of signal) and PLL lock status (green = locked, yellow = un-locked). Front panel pushbuttons and a numeric readout display the data rate to $\sim 0.01 \%$ accuracy. For the L200, the mode pushbutton changes the display and a bi-color mode LED (along with front panel graphics) indicates the parameter being displayed. Yellow indicates the data rate in $\mathrm{Mb} / \mathrm{s}$, green indicates the data rate in $\mathrm{Gb} / \mathrm{s}$, and dark indicates off mode. For the L201A and L202A, the mode pushbutton turns the display on (data rate indicated in $\mathrm{Gb} / \mathrm{s}$ ) or off.

Third Millennium Engineering www.tmeplano.com

## ModBlock Accessories

Accessories are available for various kinds of cable assemblies, adapters, commercial power supplies, fastening hardware, rack-mount kits, SFP modules, fiber optic cleaning supplies, tools, and graphical user interface (GUI) software. Other accessories will be added over time and upon user request.

## Cable Assemblies

Cable assemblies are offered to make ModBlock power, LAN, coaxial, and fiber optic connections. AC power cords are not listed, as they are included with power supplies.

## A100A-*, ModBlock Power Daisy-chain Jumpers

ModBlock 2-pin power cable assemblies are required to daisy-chain jumper 12 VDC power between active ModBlocks. These cable assemblies are made with twisted Teflon-coated \#22 stranded wires (brown=negative, red=positive) and a 2-pin plug on each end (both with female contacts). They are rated up to 5 amps of current, which is a 50 mV drop per conductor per foot (i.e., low). The plugs are locking, keyed, and have gold-plated contacts for long-term reliability. A 6 inch cable is recommended for daisy-chain connecting quarter rack width ModBlocks horizontally. A 4 inch cable is recommended for daisy-chain connecting 1 U ModBlocks vertically. Cable lengths are measured between connector mating faces. Any length can be provided upon request.

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## A101A-*, ModBlock Power Extension Cords

ModBlock 2-pin power cable assemblies extend the length of 12 VDC power cables assemblies for active ModBlocks. These cable assemblies are made with twisted Teflon-coated \#22 stranded wires (brown=negative, red=positive) and a 2-pin plug on each end (one with female contacts, one with male contacts). They are rated up to 5 amps of current, which is a 50 mV drop per conductor per foot (i.e., low). The plugs are locking, keyed, and have gold-plated contacts for long-term reliability. Cable lengths are measured between connector mating faces. Any length can be provided upon request.

ModBlock Power Cable Assembly Choices

## A105A, ModBlock Power Y-Cord

ModBlock 2-pin power "Y-cord" cable assemblies are useful to supply 12 VDC power to several active ModBlocks and avoid excessively long DC power cable daisy-chains. These Ycords are made with twisted Teflon-coated \#22 stranded wires (brown=negative, red=positive) and three 2-pin plugs (two with female contacts, one with male contacts). Y-cords are rated up to 5 amps of current and are 3 inches long. The plugs are locking, keyed, and have gold-plated contacts for long-term reliability.

## A120A-*, Cat5E LAN Patch Cords

## A121A-*, Cat5E LAN Crossover Patch Cords

All active ModBlocks have an embedded controller for optional remote ModBlock operation via 10Base-T Ethernet LAN. For remote operation, a LAN cable is required to directly connect to a computer (crossover cable type) or to a router (normal type). There is nothing special about the Cat5E LAN cables listed below, available from many commercial distributors. These listed LAN cables are provided for purchasing convenience. Normal cables are black (available up to 100 feet) and crossover cables are yellow. Other colors are available.

A130A-*, Coaxial Patch Cords, SMA-male to SMA-male
Most fiber optic and all microwave and high-speed logic ModBlocks require coaxial cable assemblies with SMA-male connectors (at least on one end) to deliver high-speed electrical signals. Many kinds of SMA coaxial cable assemblies with a variety of microwave performance specifications are available from many commercial distributors and could be used. The listed SMA coaxial cable assemblies are provided for purchasing convenience, but also represent a good price-performance-durability value from TME experience. These cables are 18 GHz grade, 0.141 " diameter type with insulated jacket, have low-loss dielectrics ( $<0.5 \mathrm{~dB} @ 10 \mathrm{GHz}$ ), and male SMA connectors on both ends.

A145A-*, Fiber Optic Patch Cords, 62.5 micron Multimode, FC UPC to FC/UPC
Fiber optic ModBlocks require different kinds of fiber optic cable assemblies to deliver optical signals. Many kinds of fiber optic cable assemblies with a variety of performance specifications are available from many commercial distributors and could be used. The listed fiber optic cable assemblies are provided for purchasing convenience, but also represent a good price-performance-durability value from TME experience. All cables have a 3mm OD protective jacket

Third Millennium Engineering www.tmeplano.com

ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories and lengths are in meters. Any length can be provided upon request. Polarized cable assemblies are made with narrow type connectors and with the slow axis aligned to the connector key.

These cable assemblies are used with Utility ModBlocks and will be coming soon! Send an email request to ModBlocks@tmeplano.com to make it sooner!

## Signal Adapters

Signal adapters are often needed to convert cable assembly or ModBlock I/O connectors from one type or gender to another. Such adapters are available from several commercial distributors and could be used. The listed adapters are provided for purchasing convenience, but also represent a good price-performance-durability value from TME experience. Listed utility adapters are not commercially distributed.

## ModBlock 12VDC Power Supplies

Active ModBlocks require 12 VDC power to operate, which can be accomplished many ways (see figures below for examples). 12 VDC power can be supplied from a commercial wallmount or desktop AC to 12 VDC power supply, provided the DC output has the proper 2-pin plug with correct wiring polarity. When only one or a few ModBlocks are in use, a wall mount supply may be adequate. When more than a few ModBlocks are in use, a desktop supply may be adequate. When many ModBlocks are in use, a ModBlock power supply with multiple 5 amp rated fan-outs (such as A340A) may be required. A Y-cord (A105A) or ModBlock power fan-out may be needed to avoid excessively long DC power cable daisy-chains.

## Various ModBlock Power Arrangements

Third Millennium Engineering www.tmeplano.com

ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories

## A300A, Power Supply, Wall-mount Style, 24 Watt

This desktop power supply is a commercial grade switching power supply. It measures 2.2"Wx3.4"Lx1.3"H and has an integral 2-prong AC plug (male) to directly plug into an AC wall outlet. It accepts worldwide AC power (120/240 VAC, 47-63 Hz) and outputs 12 VDC at up to 2 amps. It is over-current and short circuit protected and has $\pm 2 \%$ maximum line regulation, $\pm 5 \%$ load regulation, $1 \%$ maximum ripple and noise, and Energy Star Compliant Level 4 efficiency. It has a 6 foot long DC power cord with a 2-pin plug (female contacts), which can be plugged directly into a ModBlock.

## A320A, Power Supply, Desktop Style, 120 Watt

This desktop power supply is a medical grade switching power supply. It measures 2.9 "Wx9.0"Lx2.0"H and has an IEC320 type AC power inlet for use with a separable 3-prong AC power cord. It accepts worldwide AC power ( $120 / 240$ VAC, $47-63 \mathrm{~Hz}$ ) and outputs 12 VDC at up to 10 amps via a 5 foot long DC power cord. It is over-current and short circuit protected and has $\pm 1 \%$ combined line and load regulation, $1 \%$ maximum ripple and noise, $86 \%$ typical efficiency, and weighs 1.5 pounds. A Y-cord adapter ( 6 inches long, brown=negative, red=positive) is provided with two 2-pin plugs (female contacts), each rated for a 5 amp load. Each of the two adapter plugs can be plugged directly into a ModBlock. A 6 foot 120VAC power cord is included.

## A340A-*, ModBlock Power Supply, 200 Watt

## ModBlock 12VDC Current Monitor

## ModBlock Ethernet Switch

Coming soon! Send an email request to ModBlocks@tmeplano.com to make it sooner!

## ModBlock Fastening Hardware

Hardware is offered for fastening multiple ModBlocks horizontally or vertically or for rackmounting.

## A400A, ModBlock Horizontal Fastener Screws

ModBlocks are fastened horizontally using \#6-32 by $1 / 4$ " long, black-oxide finished, stainless steel, Phillips flat head screws. These screws are widely available and a set of 5 screws is normally shipped with each ModBlock. A box of 100 screws is offered for purchasing convenience if additional screws are needed.

A412A, ModBlock Vertical Fastener Kit, 2U
A413A, ModBlock Vertical Fastener Kit, 3U
A414A, ModBlock Vertical Fastener Kit, 4U
ModBlocks are fastened vertically into desktop stacks by using a vertical fastener kit. Kits are offered for $2 \mathrm{U}, 3 \mathrm{U}$, and 4 U high stacks (kits for higher stacks available upon request). Each kit includes two black aluminum machined bars and a set of A400A screws. At least one kit is required for fastening the front panel ends vertically. A second kit can be added near the rear panels for added mechanical strength or better overall alignment as needed.

Third Millennium Engineering www.tmeplano.com
Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories A421A, ModBlock Rack-mount Kit, 1U

## A422A, ModBlock Rack-mount Kit, 2U

## A423A, ModBlock Rack-mount Kit, 3U

## A424A, ModBlock Rack-mount Kit, 4U

ModBlocks can be adapted for 19 inch rack-mount use by installing a rack-mount kit (1U size shown). Kits are offered for 1U, 2U, 3U, and 4U high stacks (kits for higher stacks available upon request). Each kit includes two black aluminum machined rack-mount ears and a set of A400A screws.

## A430A, ModBlock Side Panel Kit, 1U-4.7", for 0.5U ModBlocks

0.5U ModBlocks require a side panel kit in order to fasten them to other ModBlocks. Each kit includes two black $1 \mathrm{U} \times 4.7$ " long aluminum machined side panels and a set of \#4-40 PFH mounting screws. The kit will accommodate two 0.5U ModBlocks.

## A600 Series, SFP Modules

Various pluggable SFP transceiver modules are offered for use in F220A (page 88) and F221A (page 90) transceiver fiber optic ModBlocks. If required, SFP module performance specification details listed as "SFP dependent" for the F200A and F221A can be provided upon request. Fiber optic SFP modules have LC duplex optical connections and "copper" SFP modules have RJ-45 LAN connectors.

## Cleaning Supplies

Proper fiber optic connector cleaning practices must be used with all fiber optic ModBlocks to avoid connector damage from invisible "dirt" (connector damage is not warranted). The proper cleaning supplies are to use both a "wipe" box and swabs, as described below. Both are available from a few distributors, but are listed here for purchasing convenience.

## A700A, Fiber Optic "Wipe" Box

## A701A, Fiber Optic "Wipe" Box Refill Cartridge

This fiber optic "wipe" box is used to clean the tips of fiber optic cable assemblies, prior to mating to a fiber optic panel connector or fiber optic adapter.

## A702A, Fiber Optic Swabs

These fiber optic swabs are used to clean the tips of fiber optic cable assemblies that are within the hole in a fiber optic panel connector or fiber optic adapter. They are packaged 5 swabs per plastic bag and 200 swabs per box ( 40 bags).

## ITU Fiber Optic Frequencies, Wavelengths, and Channels for C and L bands

Notes:
Channels with a "C" or "L" prefix are on an ITU 100 GHz grid
Channels with an " H " or " Q " prefix are on an ITU 50 GHz grid
Channels with a "C" or "H" prefix are in the ITU "C-band"
Channels with an " $L$ " or " $Q$ " prefix are in the ITU "L-band"
Lambda means wavelength

## Standard Warranty

Third Millennium Engineering (TME) warrants that the Products it manufactures are free from defective material and workmanship for a period of one (1) year.

TME will remedy any such warranted defect subject to the following terms and conditions:

1. An RMA number must be obtained from TME before returning a Product to TME
2. Returned Products to be delivered for TME examination:
a. With the RMA number on paperwork
b. With transportation charges to TME paid by sender
c. Within one (1) year from the date of sale to the original customer
d. With the product returned intact
3. TME will determine in its sole discretion
a. Whether an alleged defect actually exists
b. Whether to repair or replace a defective Product
4. TME will return the Product to sender
a. With transportation charges to sender paid by TME for the domestic USA
b. Using 3-5 day "ground" common carrier services
c. At sender's cost if faster shipment or international shipment required

This warranty does not extend to any TME Product which has been:

1. Subjected to misuse, neglect, accident, improper installation, static discharge, fiber optic connector damage, excessive optical or electrical input power levels, or used in violation of operating instructions or operating environment
2. Repaired, calibrated, or altered in any way by a facility that is not approved, in writing, by TME to perform such work
3. Subjected to removal, defacing, or changing Product seals or serial numbers
4. Manufactured by another company and resold intact by TME

This warranty is in lieu of all other warranties expressed or implied for the Products and all such other warranties are hereby expressly excluded. TME specifically disclaims the implied warranties of merchantability and fitness for a particular purpose. TME reserves the right to modify or change the warranty without notice.
TME shall not be liable for any direct, indirect, special, incidental or consequential damages, whether based on contract, tort or any other legal theory. To the extent allowed by law, the remedies provided herein are the customer's sole and exclusive remedies.

## Important Notice

TME reserves the right to make corrections, modifications, enhancements, improvements, and other changes to its Products and Services at any time and to discontinue any Product or Service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All Products are sold subject to TME's terms and conditions of sale supplied at the time of order acknowledgment.

TME warrants performance of its Products to the specifications applicable at the time of sale in accordance with TME's standard warranty. Testing and other quality control techniques are used to the extent TME deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each Product is not necessarily performed.
TME assumes no liability for applications assistance or customer product design. Customers are responsible for their own products and applications using TME Products. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TME does not warrant or represent that any license, either express or implied, is granted under any TME patent right, copyright, mask work right, or other TME intellectual property right relating to any combination, machine, or process in which TME Products or Services are used. Information published by TME regarding third-party products or services does not constitute a license from TME to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TME under the patents or other intellectual property of TME.
Reproduction of information in TME catalogs, data books, data sheets, or manuals is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of any such information with alteration is an unfair and deceptive business practice. TME is not responsible or liable for such altered documentation.

Resale of TME Products or Services with statements different from or beyond the parameters stated by TME for that Product or Service voids all express and any implied warranties for the associated TME Product or Service and is an unfair and deceptive business practice. TME is not responsible or liable for any such statements.

TME Products are not authorized for use in safety-critical applications (such as life support) where a failure of the TME Product would reasonably be expected to cause severe personal injury or death, unless officers of both parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TME Products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TME. Further, Buyers must fully indemnify TME and its representatives against any damages arising out of the use of TME Products in such safety-critical applications.

TME Products are neither designed nor intended for use in military/aerospace applications or environments unless the TME Products are specifically designated by TME as military-grade. Only Products designated by TME as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TME Products which TME has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TME Products are neither designed nor intended for use in automotive applications or environments unless the specific TME Products are designated by TME as compliant with ISO/TS 16949 or other automotive requirements. Buyers acknowledge and agree that, if they use any non-designated Products in automotive applications, TME will not be responsible for any failure to meet such requirements.

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories Third Millennium Engineering

Third Millennium Engineering (TME) is a multi-disciplinary Texas-based professional engineering company with one location in Plano, Texas USA. It is classified as a small business and sole proprietorship, owned and operated by Dr. Steve Morra since 1996. Dr. Morra is a Doctor of Engineering (multi-disciplinary), Professional Engineer (Texas), and highly experienced in many technical fields. TME's mission is "to help customers create and manufacture advanced technology products for our future". TME is registered with the Federal Central Contractor (CCR), Dunn \& Bradstreet, and SBA Pro-NET programs. TME is a "Star Supplier" for Lockheed-Martin, being rated in the top 100 of $\sim 2500$ suppliers. See www.tmeplano.com for more details or contact Dr. Morra by email at steve@tmeplano.com or by telephone at 972-491-1132.

TME has historically designed and manufactured various custom engineered, complex, multi-functional, high-speed fiber optic test equipment and products for the commercial-industrial and defense industries. TME still provides custom equipment, low volume high technology product manufacturing, and engineering and consulting services involving fiber optic, microwave, electronic, packaging, and many other technologies. You can buy exactly what you need with as little as verbal specifications from an email or phone call.

Recently TME has ventured into designing and producing its first standard product line of Modular Fiber Optic, Microwave, and Utility Functional Blocks, as shown in this catalog. These modular blocks are a spinoff of the technologies successfully used in past custom designs. TME encourages prospective and current customers to request adding new standard products to this line.
Why risk making it or doing without it, when you can buy exactly what you need?

## Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories Domestic USA Pricing and Delivery

Prices and deliveries shown below are expected to remain constant through 2009. However, TME reserves the right to change price and/or delivery without notice, primarily due to changes in supplier prices and market conditions. All prices are in United States dollars.

Depending on the function, ModBlock prices range from ~\$1.5K to ~\$60K (typically \$8K-15K) each. Some ModBlocks are stocked or have a 2-4 week delivery time. Otherwise, delivery time is the longest lead-time major component ("pacing item" in price lists) plus 1 week, typically 6 weeks. Quantity discounts are listed for each price list in this section.

Unless otherwise specified, all ModBlocks are warranted for one year. Warranty excludes excessive electrical or optical input power as applicable, electrostatic discharge (ESD) damage, optical connector damage (dirt, wrong connector type), and general abuse. See warranty details in the "Standard Warranty" section on page 196.

## Placing an Order

Prices and delivery times listed in this section are firm and valid. A formal request for quote (RFQ) will be sent if required before purchase. Place purchase orders directly with Third Millennium Engineering. To place an order, send an email purchase order to sales@tmeplano.com or mail purchase order to Third Millennium Engineering, 3308 Omar Lane, Plano Texas, 75023-3949. Order acceptance may be contingent upon satisfactory credit review or approval of credit terms by TME. TME identifiers are EIN $=72-1535334$, $\mathrm{D} \& \mathrm{~B}=11-568-9809$, and TME Cage Code $=3$ CPK6. See the following sections for details on taxes, shipping, insurance, returns, cancellations, and payment.

## Taxes

Prices do not include any applicable taxes, such as state and local taxes. Any required taxes will be added to the total order. Sales tax is applicable to sales made to locations in Texas.

Sales tax will not be added to an order if TME receives a valid and signed sales tax exemption form prior to shipment.

## Shipping and Insurance

Prices do not include shipping or shipment insurance. Shipping and insurance will be added to the total order unless other arrangements have been made. Shipping will be by FedEx 3 day delivery in the domestic USA, unless otherwise specified by the customer. Insurance for "FOB Destination"

Third Millennium Engineering
www.tmeplano.com

## ModBlocks Catalog

Modular Fiber Optic, Microwave, High-Speed Logic, and Utility Functional Blocks and Accessories is typically about $0.5 \%$ of the shipment's declared value up to a $\$ 50,000$ limit per carton. The declared value will be the total price of the items shipped within each carton.

Alternatively, the customer may elect to provide TME with a common carrier shipping account number and shipping charges will not be added to the order. Alternatively, the customer may elect that shipment be made "FOB Origin" for insurance purposes. "FOB Origin" means the customer is insuring the shipment and neither TME nor the carrier is liable for loss or damage during shipment.

## Returns and Cancellations

All sales are final and are "Non-Returnable" and "Non-Cancelable" (NRNC), except as provided by the Warranty.

## Payment

An invoice will be sent out when an order is shipped. Payment is due "net 30 days". Make payment by electronic funds transfer (preferred), by company check, or credit card check. Credit cards are not accepted for payment at this time.

| A615 | SFP Transceiver, 1310nm, 622Mb/s, 15km | $\$ 293$ | 2 |
| A616 | SFP Transceiver, 1310nm, 622Mb/s, 40km | $\$ 579$ | 2 |
| A620 | SFP Transceiver, 1310nm, 1.25Gb/s, 10km | $\$ 306$ | 2 |
| A625 | SFP Transceiver, 1310nm, 2.125Gb/s, 10km | $\$ 325$ | 2 |
| A626 | SFP Transceiver, 1310nm, 2.125Gb/s, 55km | $\$ 910$ | 2 |
| A630 | SFP Transceiver, 1310nm, 2.67Gb/s, 2km | $\$ 501$ | 2 |
| A631 | SFP Transceiver, 1310nm, 2.67Gb/s, 15km | $\$ 657$ | 2 |
| A632 | SFP Transceiver, 1310nm, 2.67Gb/s, 40km | $\$ 1,463$ | 2 |
| A635 | SFP Transceiver, 1310nm, 4.25Gb/s, 4km | $\$ 468$ | 2 |
| A636 | SFP Transceiver, 1310nm, 4.25Gb/s, 10km | $\$ 930$ | 2 |
| A637 | SFP Transceiver, 1310nm, 4.25Gb/s, 30km | $\$ 1,242$ | 2 |
| A640 | SFP Transceiver, 1550nm, 155Mb/s, 80km | $\$ 754$ | 2 |
| A645 | SFP Transceiver, 1550nm, 622Mb/s, 80km | $\$ 806$ | 2 |
| A650 | SFP Transceiver, 1550nm, 2.125Gb/s, 90km | $\$ 1,138$ | 2 |
| A651 | SFP Transceiver, 1550nm, 2.125Gb/s, 115km | $\$ 1,638$ | 2 |
| A655 | SFP Transceiver, 1550nm, 2.67Gb/s, 80km | $\$ 1,937$ | 2 |
| A670 | SFP Transceiver, copper, 10/100/1000BaseT | $\$ 202$ | 2 |
| A700A | Supply, fiber optic, "wipe" box | $\$ 319$ | 1 |
| A701A | Supply, fiber optic, "wipe" box refill cartridge | $\$ 130$ | 1 |
| A702A | Supply, fiber optic, swabs, box of 200 | $\$ 507$ | 1 |
